ABOUT SPIRE

Spire is natural gas distribution company pipelines as well as propane and natural gas liquids pipelines within Alabama. These pipeline systems transport natural gas from remote production areas to local natural gas processing facilities where natural gas liquids (NGLs) are extracted before transportation to end users such as natural gas utilities and industrial users.

PRODUCTS/DOT GUIDEBOOK ID#/GUIDE#:

Carbon Dioxide	1013	120
Natural Gas	1971	115

ALABAMA COUNTIES OF OPERATION:

Autauga	Macon
Bibb	Marengo
Calhoun	Montgomery
Chambers	Perry
Chilton	Pickens
Choctaw	Russell
Cleburne	Shelby
Dallas	St. Clair
Elmore	Sumter
Etowah	Talladega
Greene	Tallapoosa
Jefferson	Tuscaloosa
Hale	Morgan
Lauderdale	Walker
Lee	Winston
Lowndes	

Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.

PRODUCTS TRANSPORTED

Product	Description	Health and Fire Hazards
Natural Gas	Leak Type: Gas Vapor: Lighter than Air Very flammable and a white vapor cloud may be visible near the site of a leak.	Health: Extremely high concentrations may cause irritation or asphyxiation. Possible presence of H ₂ S, a toxic gas. Fire Hazards: Extremely flammable and easily ignited by heat, sparks or flames.
Carbon Dioxide (CO ₂)	Leak Type: Gas Vapor: Heavier than air. If there is a leak in a CO ₂ pipeline, the product will become very cold when contact with the outside atmosphere is made. The area around the leak may look frozen or covered in frost. In wet areas, bubbling water or a muddy looking area may indicate a leak.	Health: Vapors may cause dizziness or asphyxiation without warning. Contact with CO ₂ may cause burns, severe injury and/or frostbite. Fire Hazards: A nonflammable gas that is heavier than air. Containers of CO ₂ may explode when heated and ruptured cylinders may rocket.
