

ABOUT TRANSMONTAIGNE

At TransMontaigne, we are experts in the fuel supply chain. We have an extensive network of fuel storage providers, allowing us to provide reliable downstream supplies of competitively priced unbranded fuels. Additionally, TransMontaigne offers fuel transport services, crude oil transport, and commercial marine fuel supply.

TransMontaigne maintains a Damage Prevention Program in accordance with state and federal guidelines. The purpose of this program is to prevent damage to our pipelines and facilities from excavation activities, such as digging, trenching, blasting, boring, tunneling, backfilling, or by any other digging activity.

HOW WOULD YOU KNOW WHERE THE PIPELINE IS?

Most pipelines are underground, where they are more protected from the elements and minimize interference with surface uses. Even so, pipeline rights-of-way are clearly identified by pipeline markers along pipeline routes that identify the approximate—NOT EXACT—location of the pipeline. It also contains TransMontaigne company information, type of product transported, and the emergency contact number. Markers do not indicate pipeline burial depth, which will vary.

WHAT DOES TRANSMONTAIGNE DO IF A LEAK OCCURS?

To prepare for the event of a leak, TransMontaigne personnel regularly communicate, plan and train with local emergency responders. Upon the notification of an incident or leak the gas utility company will immediately dispatch trained personnel to assist emergency responders. TransMontaigne personnel and emergency responders are trained to protect life, property and facilities in the case of an emergency. TransMontaigne personnel will take steps to minimize the amount of gas that leaks out and to minimize the impact to the surrounding community.

MAINTAINING SAFETY AND INTEGRITY OF PIPELINES

TransMontaigne invests significant time and capital maintaining the quality and integrity of their gas utility system. The system is monitored 24 hours a day. TransMontaigne also utilizes ground surveillance patrolling to identify potential dangers. Field personnel are immediately notified if there is a possibility of a leak. System valves can be utilized to isolate a leak.

PIPELINE PURPOSE AND RELIABILITY

TransMontaigne operates Highly Volatile Liquid and Hazardous Liquid Pipelines. According to National Transportation Safety Board statistics, pipelines are the safest and most efficient means of transporting products, and these pipelines transport over 700 million gallons of product per day in order to meet our energy needs.

TRANSMISSION PIPELINE MAPPING

The National Pipeline Mapping System (NPMS) is a geographic information system created by the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration (PHMSA) in cooperation with other federal and state

CALIFORNIA COUNTIES OF OPERATION:

Contra Costa

Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.

governmental agencies and the pipeline industry to provide information about pipeline operators and their pipelines. The NPMS Web site is searchable by ZIP Code or by county and state, and can display a county map that is printable.

Within the NPMS, PHMSA has developed the Pipeline Integrity Management Mapping Application (PIMMA) for use by pipeline operators and federal, state, and local government officials only. The application contains sensitive pipeline infrastructure information that can be viewed via internet browser. Access to PIMMA is limited to federal, state, and local government officials as well as pipeline operators. PIMMA access cannot be given to any person who is not a direct employee of a government agency.

For a list of pipeline operators with transmission pipelines in your area and their contact information or to apply for PIMMA access, go to www.npms.phmsa.dot.gov/. Operators of production facilities, gas/liquid gathering piping and distribution piping, are not represented by NPMS nor are they required to be. Because TransMontaigne assets are not transmission, you will not find them on the NPMS site.
