BHE GT&S, through its local operating company, Carolina Gas Transmission, LLC (CGT) owns and operates a high-pressure, interstate natural gas pipeline company providing safe, reliable and affordable natural gas transportation services to wholesale customers such as power generators, large industrials, local distribution companies, municipalities, and energy marketers. CGT's nearly 1,500 miles of pipeline throughout South Carolina and a portion of southeast Georgia provides a critical infrastructure link between end users and wholesale supply.

CGT is a transportation-only service provider. This allows CGT customers to manage their commodity risk through the wholesale supply market. CGT's pipeline system is designed to serve Firm Transportation (FT) customers. FT service ensures pipeline capacity is available to transport customers' natural gas supply whenever it is needed, 365 days per year.

Facts:

- Approximately 70% of the natural gas consumed in South Carolina flows through CGT's pipeline system.
- 1,458 miles of natural gas transmission lines in South Carolina and Georgia
- Seven supply interconnects, six compressor stations and 150+ delivery points
- Natural gas supplied through interconnects in the South Carolina upstate, Aiken, South Carolina and near Savannah, Georgia.
- Regulated by the Federal Energy Regulatory Commission (FERC) and the Pipeline Hazardous Material Safety Administration (PHMSA)
