**ABOUT IMTT EPIC LLC**

IMTT Epic LLC, a leading independent liquid bulk storage and logistics solutions provider. IMTT Epic successfully bridges the gap between supply and demand centers through efficient logistics planning and expert management. With a flexible approach to every customer's unique requirements, IMTT Epic manages the storage and transportation requirements for many of the world's leading market participants. We will always focus on protecting the environment and 100% compliant operations. Our top priority is to ensure the safety of every single person who enters our facilities. We are always looking to grow our facilities and add to our network of terminals.

**PIPELINE PURPOSE AND RELIABILITY**

Pipelines are the safest and most efficient means of transporting natural gas and petroleum products, according to National Transportation Safety Board statistics. In the United States alone, there are over 200,000 miles of petroleum pipelines and 300,000 miles of natural gas transmission pipelines in use every day. These pipelines transport the natural gas, which provides about 24 percent of all the energy used in the United States, and over 700 million gallons of petroleum products per day.

**HOW WOULD YOU RECOGNIZE A PIPELINE LEAK?**

- **Sight:** Liquid pools, discolored or abnormally dry soil/vegetation, continuous bubbling in wet or flooded areas, an oily sheen on water surfaces, and vaporous fogs or blowing dirt around a pipeline area can all be indicative of a pipeline leak. Dead or discolored plants in an otherwise healthy area of vegetation or frozen ground in warm weather are other possible signs.
- **Sound:** Volume can range from a quiet hissing to a loud roar depending on the size of the leak and pipeline system.
- **Smell:** An unusual smell, petroleum odor, or gaseous odor will sometimes accompany pipeline leaks. Natural Gas and Highly Volatile Liquids are colorless, tasteless and odorless unless

commercial odorants or Mercaptan is added. Gas transmission/gas gathering pipelines are odorless, but may contain a hydrocarbon smell.

**WHAT DOES IMTT EPIC LLC DO IF A LEAK OCCURS?**

To prepare for the event of a leak, IMTT Epic LLC regularly communicates, plans and trains with local emergency responders. Upon the notification of an incident or leak IMTT Epic LLC will immediately dispatch trained personnel to assist emergency responders. IMTT Epic LLC and emergency responders are trained to protect life, property and facilities in the case of an emergency. IMTT Epic LLC will also take steps to minimize the amount of product that leaks out and to isolate the pipeline emergency.

**MAINTAINING SAFETY AND INTEGRITY OF PIPELINES**

IMTT Epic LLC invests significant time and capital maintaining the quality and integrity of their pipeline systems. Most active pipelines are monitored 24 hours a day via manned control centers. IMTT Epic LLC also utilizes aerial surveillance and/or on-ground observers to identify potential dangers. Control center personnel continually monitor the pipeline system and assess changes in pressure and flow. They notify field personnel if there is a possibility of a leak. Automatic shut-off valves are sometimes utilized to isolate a leak.

IMTT Epic LLC has developed a supplemental hazard and assessment program known as an Integrity Management Program (IMP). IMPs have been implemented for areas designated as "high consequence areas" in accordance with federal regulations. Specific information about an IMTT Epic LLC's program may be found by contacting them directly.

**PLANNING, ZONING AND PROPERTY DEVELOPMENT**

It is crucial to coordinate with IMTT Epic LLC to take the location of pipelines into consideration in land use plans, zoning, and property development activities.

**GEORGIA  
COUNTIES OF OPERATION:**

Bibb	Houston
Fulton	

*Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.*

Developments can make use of pipeline easements as open spaces and greenway connectors. Pipeline depth is a crucial consideration during development planning to ensure costs for lowering or relocation are identified. Changes to the topography on either side of the pipeline may impose unacceptable stresses on the pipeline. Pipeline operators would like to coordinate the development of site plans where large numbers of people congregate, including schools, churches, etc.

**EMERGENCY PREPAREDNESS FOR EMERGENCY AND PUBLIC OFFICIALS**

IMTT Epic LLC provides training annually for emergency and public officials. Company personnel and emergency responders are trained to protect life, property and facilities in the case of an emergency. For more information on emergency response plans, please contact us directly. The following guidelines are designed to ensure the safety of those in the area if a petroleum product or natural gas pipeline leak is suspected or detected:

- **Secure the area around the leak to a safe distance.** Because vapors from the products carried in pipelines can migrate great distances, it is important to remove all ignition sources from the area. Keep in mind, Highly Volatile Liquid (HVL) vapors are heavier than air and can collect in low areas such as ditches, sewers, etc. If safe, evacuating people from homes, businesses, schools and

other places of congregation, as well as controlling access to the site may be required in some incident scenarios. Sheltering in place may be the safest action if the circumstances make going outdoors dangerous.

- **Establish a command center.** Work with IMTT Epic LLC as you develop a plan to address the emergency. The pipeline operator will need to know:
  - Your contact information and the location of the emergency
  - Size, characteristics and behavior of the incident, and if there are any primary or secondary fires
  - Any injuries or deaths
  - The proximity of the incident to any structures, buildings, etc.

- Any environmental concerns such as bodies of water, grasslands, endangered wildlife and fish, etc.
- **Evacuate or shelter in place.** Depending on the level of chemical, natural gas, or product, and whether or not the product was released, or other variables, it may be necessary to evacuate the public or have the public shelter in place. Evacuation route and the location of the incident will determine which procedure is required, but both may be necessary. Evacuate people upwind of the incident if necessary. Involving the pipeline company may be important in making this decision.
- **For more information about how to attain a copy of our Emergency Response Plan, please contact IMTT Epic LLC directly.**

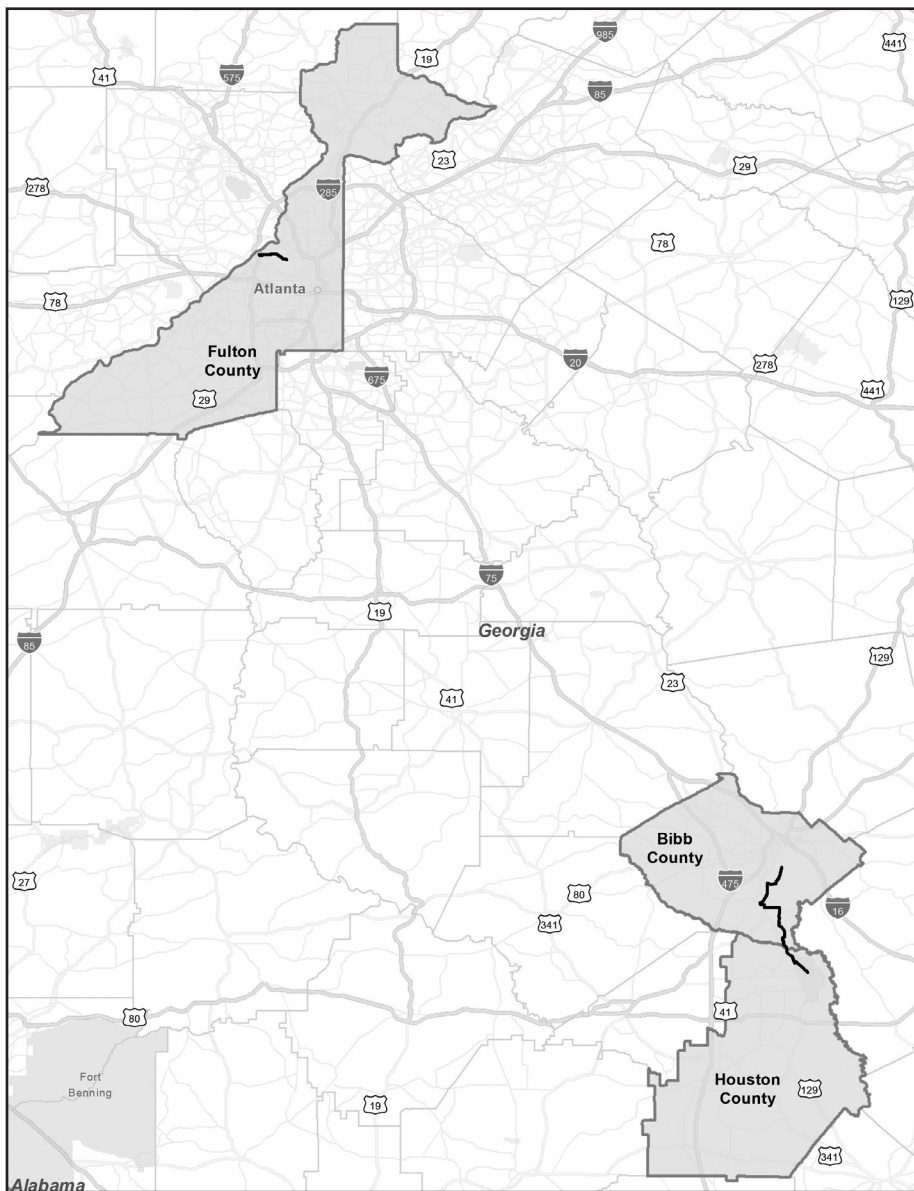

## 911 DISPATCH

911 Dispatch personnel play a critical role in effective response to pipeline incidents. Knowing the companies, their contact information, and the products transported in your respective jurisdiction is important for prompt and correct responses in the case of a pipeline incident. Dispatchers' actions can save lives, direct the appropriate emergency responders to the scene, and protect our nations' infrastructure from additional issues that can be caused by improper response. Follow these simple guidelines in the case of a pipeline incident:

- Gather the proper information (if possible): company, product, and release characteristics
- Know the appropriate response to each product
- Know the wind direction at the time
- Warn of ignition sources if possible
- Dispatch appropriate emergency responders
- Contact IMTT Epic LLC

For additional information about IMTT Epic LLC:

Phone: 478 788-1877
