

Citgo Petroleum Corporation - Arlington Heights Terminal, Columbus Terminal, Dayton Terminal, East Chicago Terminal, Linden Terminal, Niles Terminal, Port Everglades Terminal, Toledo Terminal

ABOUT CITGO PETROLEUM CORPORATION

CITGO Petroleum Corporation (CITGO), headquartered in Houston, Texas, operates several hazardous liquid pipelines associated with fuel terminal facilities. These short pipeline systems are located in the states of Illinois, Indiana, Michigan, Ohio, New Jersey and Florida and they transport Gasoline and Diesel Fuels.

WHAT DOES CITGO PETROLEUM CORPORATION DO IF A LEAK OCCURS?

To prepare for the event of a leak, pipeline companies regularly communicate, plan and train with local emergency responders. Upon the notification of an incident or leak CITGO will immediately dispatch trained personnel to assist emergency responders.

CITGO employees and emergency responders are trained to protect life, property and facilities in the case of an emergency.

CITGO personnel will also take steps to minimize the amount of product that leaks out and to isolate the pipeline emergency.

MAINTAINING SAFETY AND INTEGRITY OF PIPELINES

CITGO invests significant time and capital maintaining the quality and integrity of our pipeline systems. Most active pipelines are monitored 24 hours a day via manned control centers. CITGO also utilizes aerial surveillance and/or on-ground observers to identify potential dangers. Control center personnel continually monitor some pipeline systems and assess changes in pressure and flow. They notify field personnel if there is a possibility of a leak. Automatic shut-off valves are sometimes utilized to isolate a leak.

Gas transmission and hazardous liquid pipeline operators have developed supplemental hazard and assessment

PRODUCTS TRANSPORTED IN YOUR AREA

PRODUCT	LEAK TYPE	VAPORS
HAZARDOUS LIQUIDS [SUCH AS: CRUDE OIL, DIESEL FUEL, JET FUEL, GASOLINE, AND OTHER REFINED PRODUCTS]	Liquid	Initially heavier than air and spread along ground and collect in low or confined areas. Vapors may travel to source of ignition and flash back. Explosion hazards indoors, outdoors or in sewers.
HEALTH HAZARDS	Inhalation or contact with material may irritate or burn skin and eyes. Fire may produce irritating, corrosive and/or toxic gases. Vapors may cause dizziness or suffocation. Runoff from fire control or dilution water may cause pollution.
