WORKING TOGETHER TO KEEP OUR COMMUNITIES SAFE

Every day, we have the pleasure of serving millions of people with our five natural gas delivery businesses. We also maintain an underground natural gas storage field and a liquid propane pipeline.

We know it's our responsibility to keep those we serve along our pipelines safe. And though underground pipes are the safest most reliable way to transport natural gas and other petroleum products, accidents can always happen.

That's why we routinely monitor, patrol and inspect our pipelines via aircraft, vehicles and on foot. We also work to promote safety and pipeline awareness through first-responder training courses and many customer communications like bill inserts, customer guides and more.

We do all this—and so much more—because at Spire, safety is a value. And our values drive everything we do. So our promise is to always work with the communities we serve and our first responder partners to keep our pipelines safe.

With that in mind, here's a look at where our pipelines are located, how they're marked and who to call should you ever be in an emergency situation.
