**OVERVIEW OF COUNTRYMARK'S PIPELINE INTEGRITY MANAGEMENT PLAN**

CountryMark's Pipeline Integrity Management Plan covers 246 miles of products pipeline in Indiana. These pipelines are located in Indiana running from Mt. Vernon Indiana to Peru, just north of Indianapolis. It also covers 18 miles of HVL pipeline from Griffin Indiana to Mt. Vernon Indiana. Storage and distribution facilities are maintained along the products pipeline at Mt. Vernon, Indiana, Switz City, Indiana, Jolietville, Indiana and Peru, Indiana.

To determine which pipeline operators may have facilities in a particular area, a listing of operators with contact information that may be queried by State, County or zip code is accessible at the following NPMS web site: <https://www.npms.phmsa.dot.gov/>

CountryMark transports heating oil, diesel fuel, and gasoline along the products pipeline from Mt. Vernon to the other storage facilities. The HVL pipeline transports butane, ISO butane, and natural gasoline from Griffin, Indiana to the Refinery at Mt. Vernon. In accordance with federal regulations, some segments of CountryMark's products and HVL pipelines have been designated High Consequence Areas. As a result we have implemented a company Integrity Management Plan to monitor and identify potential problems and to take corrective actions before any problems would occur.

According to National Transportation Safety Board statistics, "pipelines are the safest method of transporting petroleum products. Pipelines transport two-thirds of all the crude oil and refined products in the United States." Pipeline Integrity Management Plans in the industry are developed to maintain and improve on that safety record.

CountryMark's plan continually assesses our products pipelines for anomalies that might result in a pipeline failure. The plan requires remedial action to be taken when such an anomaly is detected.

The Pipeline Integrity Management Plan has been in effect since 2003. CountryMark has completed the baseline assessments, evaluating and remediating as necessary, all covered pipeline prior to 2008, as scheduled. Our ongoing program schedules reassessment of covered pipelines again every five years. As a result, anomalies have been detected resulting in repairs, preventative maintenance actions and in some cases sections of pipeline being replaced with new pipe.

These pipeline integrity activities are a means of assuring continued safe operation of CountryMark's pipeline and storage facilities and providing a reliable supply of quality fuel to our customers in Indiana today and in the years to come.

**OVERVIEW OF COUNTRYMARK'S INDIANA GATHERING SYSTEM PIPELINES**

CountryMark also transports crude oil from production facilities to the refinery through a system of gathering pipelines. The gathering system is not included in the formal Integrity Management Plan, however many of the same inspection and repair guidelines of the plan are incorporated in it's operation.
