OPERATOR OVERVIEW

**INCIDENT ACTION PLAN
(EMERGENCY RESPONSE PLAN)**

- Protect people first, property second
- Isolate area and deny entry
- Determine if atmosphere is safe
- Establish hazard control zones
- Evacuate if necessary
- Notify Kinder Morgan Cochin
- Control Ignition Sources
- If ignited, allow to self-extinguish
- Contain and control secondary fires

Kinder Morgan Cochin practices the National Incident Management System (NIMS) and will integrate into the Incident Command System (ICS) in an emergency.

In the unlikely event that a leak should occur, Kinder Morgan will dispatch our pipeline maintenance crews (located at strategic points along the pipeline) to the site. Once we have ensured the safety of our neighbors, employees, and contractors and the immediate dangers have been controlled, the pipeline shall be repaired and any damage to the surrounding area shall be restored.

Emergency Responders

May subscribe to Kinder Morgan's "The Responder" newsletter by visiting our Public Awareness web site located above(**):

Pipeline Unique Characteristics

Kinder Morgan operates the Cochin Pipeline System, a 1561-mile, 12-inch pipeline. In June 2014 Kinder Morgan started to transport condensate from Fair Oaks, IN to to Fort Saskatchewan, Alberta Canada.

- 1,000 psig Operating pressure
- Automated pipeline block valves
- Pump stations are located approximately every 60 miles
- Three pump stations and one meter station within IA

Pipeline Monitoring

Kinder Morgan monitors the Cochin Pipeline on a 24-hour basis from the computer assisted control system.

Pipe Markers

To ensure everyone knows the location of Kinder Morgan's Cochin pipelines, we place pipeline markers in high traffic areas such as road and railway crossings. We place them near but not necessarily on top of the pipeline or lines. It is important to remember that markers may not tell you the exact location, route, depth or number of pipelines.
