

Enable Midstream Partners owns interstate and intrastate natural gas pipelines, as well as a gas gathering operation, processing and treating services. In addition, we own crude oil gathering and hazardous liquid lines. In Kansas, we operate Enable Gas Transmission, one of our interstate natural gas transmission lines.

To view and download maps of all transmission pipelines in your county, see the National Pipeline Mapping System website (www.npms.phmsa.dot.gov), an online mapping program managed by the federal government. Pipeline markers are placed along the pipeline route to indicate the approximate location of the line and to identify where the pipeline intersects with a street, highway, railway or river. Markers display the material transported in the line, the name of the pipeline operator and an emergency telephone number

COMMITMENT TO SAFETY, HEALTH & ENVIRONMENT

Enable Midstream's primary concern is safe and reliable delivery of petroleum products. According to the National Transportation and Safety Board, pipelines are the safest and most economical way to transport these products. We are committed to the safe operation of our pipelines in your community. We monitor the operations of our pipelines from our control centers, 24 hours a day, seven days a week. Our pipelines are designed, installed, tested, operated and maintained in accordance with all applicable federal and state requirements. Enable Midstream maintains its safety record with routine inspections, corrosion protection, maintenance and test-

ing programs, employee training, integrity management program, and a public awareness program. Public awareness includes educational outreach with excavating contractors, emergency response offices, appropriate public officials, and affected public.

EMERGENCY PLANS

If a gas pipeline emergency were to occur, Enable Midstream personnel will work directly with local emergency responders. Our priorities at the scene of a pipeline emergency are the same as yours-- protect people, property and the environment. Enable Midstream field personnel are trained in Incident Command Structure (ICS) and familiar with how to work with local responders within the ICS framework. Enable Midstream personnel will restrict the flow of gas and implement other operating actions as needed to minimize the impact of the emergency. Public safety officials and other non-company personnel should not attempt to operate pipeline valves. Improper operation of pipeline valves can cause other accidents to occur.

For more information about Enable Midstream Partners' pipeline safety programs, our Integrity Management program, or emergency response plans visit our website at www.enablemidstream.com or please contact the following:
