EMS Energy Solutions, LLC offers fully integrated, turnkey pipeline operation, management, maintenance, and construction services to pipeline owners and operators, local distribution companies, and independent power, oil and gas producers in the US.

EMS Energy Solutions, LLC is committed to the continuous improvement of Environmental, Health and Safety performance to help achieve the greatest benefit to the general public and all of our clients. It is our policy to meet or exceed all applicable environmental, health and pipeline safety laws and regulations, and to facilitate full and open discussion to address responsible standards and practices where laws and regulations do not exist.

In communities along our pipelines, local operating personnel oversee the day-to-day operations of our facilities. Following strict procedures and safety standards, our operating personnel provide our local link to the community, often working closely with our facility neighbors and others in the community.

**PIPELINE SAFETY**

Inspections of our facilities help us detect potential problems before they become safety concerns. These inspections, many of which are prescribed by law, include detailed analysis of the underground corrosion protection systems along our pipelines, as well as above ground surveys for detecting signs of leaks or other potential problems. Additionally, all of our pipeline operations in the state are subject to periodic safety inspections conducted by the Louisiana Department of Natural Resources.

Our operating personnel are constantly on the alert for third party excavators who may unknowingly dig near our pipelines. Damage by outside parties is the leading cause of damage to pipelines in the United States, and we work hard to protect our facilities. To help prevent outside damage, we conduct regular communications with landowners, contractors and others who might be working around the lines so that they understand precautions they should take. We also participate in state "one-call"

programs, which notify utilities and other underground facility operators before people begin excavating. Our operating personnel also conduct regular face-to-face meetings with local community officials and emergency responders to discuss the nature of our facilities and our operations, as well as the cooperative steps to be taken in the event of a natural gas emergency.

We participate in the Louisiana One Call System. The federally-mandated "call before you dig" number, 811, was created to help prevent damage to underground utility lines and for the safety of the public. The largest cause of damage to pipelines, or other underground facilities including electric lines, telecommunication or cable wires, is excavation. In every state, any excavator, whether landscaping, building fences, or a major construction project, must make a call to a state One-Call center prior to beginning any excavation activities.

Because even relatively minor excavation activities like landscaping or placing fence posts can cause damage to a pipeline, its protective casing and/or buried utility lines, always contact the Louisiana One-Call Center before engaging in any excavation, construction, farming or digging.

In the State of Louisiana you must call 48 hours but not more than 120 hours (excluding weekends and holidays) in advance of the commencement of any excavation or demolition activity. Once your lines are marked, you will know their approximate location and you can dig safely. For additional information, check the website: <http://www.laonecall.com/>

Whether you are a homeowner or a professional excavator, one call to 811 gets your underground utility lines marked FREE OF CHARGE. Knowing what's below will protect you, your family and your neighbors.

Pipeline companies use markers like those shown to indicate the approximate location of a pipeline or pipelines. Markers identify the pipeline company, product type and have a 24-hour emergency telephone number for the pipeline

*Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.*

operator. Markers indicate the general, not exact, location of a pipeline. Never rely solely on the presence or absence of pipeline markers. Always call your state's One-Call notification service or dial 811 before digging. Pipeline markers are important to public safety. It is a federal crime for any person to willfully deface, damage, remove, or destroy any pipeline sign or right-of-way marker required by federal law.

**Know what's below.  
Call before you dig.**

PRODUCTS TRANSPORTED IN YOUR AREA		
PRODUCT	LEAK TYPE	VAPORS
NATURAL GAS	Gas	Lighter than air and will generally rise and dissipate. May gather in a confined space and travel to a source of ignition.
<b>HEALTH HAZARDS</b>		Will be easily ignited by heat, sparks or flames and will form explosive mixtures with air. Vapors may cause dizziness or asphyxiation without warning and may be toxic if inhaled at high concentrations. Contact with gas or liquefied gas may cause burns, severe injury and/or frostbite
