

# Georgia-Pacific

## WHO IS GEORGIA-PACIFIC?

We are a paper mill company business unit of Georgia-Pacific, LLC that operates about 20 miles of high pressure interstate pipeline.

Our pipeline is located in Ashley County, AR and Morehouse Parish, LA, transporting natural gas to our Crossett paper mill, chemical plant, and plywood plant.

Georgia-Pacific CrossettPaper Operations works hard to maintain the integrity of our pipeline system and keep it safe from security threats. We stay in contact with industry and government to monitor potential threats and study new technologies that will keep our facility as safe and secure as possible. Though we monitor our assets around the clock, we regularly patrol (by ground) our pipeline system and have field personnel working and living in close proximity to our facilities. In addition, we also request your help to maintain a safe, secure, and reliable pipeline system.

If you observe any unusual or suspicious activity near our pipeline facilities or in the unlikely event an emergency occurs, please call us at any time using one of the numbers listed in this document.

## WHAT ARE THE SIGNS OF A NATURAL GAS PIPELINE LEAK?

- Blowing or hissing sound
- Dust blowing from a hole in the ground
- Continuous bubbling in wet or flooded areas
- Gaseous or hydrocarbon odor
- Dead or discolored vegetation in a green area
- Flames, is a leak has ignited

## WHAT SHOULD I DO IF I SUSPECT A PIPELINE LEAK?

Your personal safety should be your first concern:

- Evacuate the area and prevent anyone from entering

- Abandon any equipment being used near the area
- Avoid any open flames
- Avoid introducing any sources of ignition to the area (such as cell phones, pagers, 2-way radios)
- Do not start/turn off motor vehicles/ electrical equipment
- Call 911 or contact local fire or law enforcement
- Notify the pipeline company
- Do not attempt to extinguish a natural gas fire
- Do not attempt to operate any pipeline valves

## PIPELINE SAFETY

System failures occur infrequently along the nation's network of intrastate/interstate natural gas pipeline facilities, and many of these are caused by damage from others digging near the pipeline. We watch for unauthorized digging, but we request your help too.

We participate in One-Call Centers and strongly encourage those who are going to dig to call their state One-Call Center or the 811 "Call before you dig" hotline (see below) to allow pipeline companies and owners to mark the underground facilities in the area before digging begins.

Know what's below.  
Call before you dig.

## PIPELINE LOCATION AND MARKERS

Pipeline markers (see to right) like these are used to indicate the approximate location of a natural gas pipeline and to provide contact information. Markers should never be removed or relocated by anyone other than a pipeline operator.
