

Kinder Morgan, Inc. is one of the largest energy infrastructure companies in North America. It owns an interest in or operates approximately 84,000 miles of pipelines and 155 terminals. Kinder Morgan's pipelines transport natural gas, refined petroleum products, crude oil, condensate, CO2 and other products, and its terminals transload and store petroleum products, ethanol and chemicals, and handle such products as steel, coal and petroleum coke. It is also a leading producer of CO2 that Kinder Morgan and others use for enhanced oil recovery projects primarily in the Permian basin. For more information please visit [www.kindermorgan.com](http://www.kindermorgan.com).

The revolutionary shale plays across the United States are creating a tremendous need for more energy infrastructure, which bodes well for us. We invest billions of dollars each year to grow the company by building new and expanding existing assets to help ensure that a variety of energy products get delivered into the marketplace. As of mid-April 2017, Kinder Morgan had \$11.7 billion in expansion and joint venture investments in our backlog which have a high certainty of completion and will drive future growth at the company across all of our business segments.

In most of our businesses we operate like a giant toll road and receive a fee for our services, generally avoiding commodity price risk. The vast majority of cash that Kinder Morgan generates is fee-based and, therefore, not directly exposed to commodity price risk; and a majority of

our production is hedged. Our customers include major oil companies, energy producers and shippers, local distribution companies and businesses across many industries.

Kinder Morgan is committed to being a good corporate citizen and conducting ourselves in an ethical and responsible manner. We spend hundreds of millions of dollars each year on integrity management and maintenance programs to operate our assets safely and to protect the public, our employees, contractors and the environment. Operationally, we continue to perform better than our industry peers relative to environmental, health and safety measures.

Kinder Morgan is the largest midstream and the third largest energy company in North America with an enterprise value of approximately \$130 billion.

**KINDER MORGAN - NATURAL GAS PIPELINES**

With approximately 70,000 miles of natural gas pipelines, Kinder Morgan owns an interest in or operates one of the largest natural gas networks in North America. We serve the major consuming markets of the United States, and our pipelines transport approximately 40 percent of the natural gas consumed daily in the U.S. Our pipelines are connected to every important natural gas resource play and supply area, including the Eagle Ford, Marcellus, Bakken, Utica, Uinta, Haynesville, Fayetteville and Barnett.

We are bullish on the future of natural gas and believe that it will be the fuel of choice in North America for many years to come. Certain industry experts project natural gas demand in the U.S. will increase by about 35 percent to nearly 110 billion cubic feet per day by 2026. This increase in natural gas supply and demand is driving the need for transport capacity from the Marcellus and Utica shale plays to growing demand centers on the Gulf Coast. Additional opportunities include the need for more capacity in the Northeast, demand for gas-fired power generation, LNG exports and exports to Mexico. As a result, our Natural Gas Pipelines business has a plethora of exciting growth opportunities that we are executing and pursuing.

## PIPELINES IN YOUR COMMUNITY

**Understanding where pipelines are located, potential hazards and how to identify and respond to a potential leak will keep your family, your employees and your community safe.**

Underground pipelines are everywhere. More than two million miles of pipelines crisscross the United States safely transporting natural gas, gasoline and other products every day. According to the National Transportation Safety Board, pipelines are the safest mode of fuel transportation, both for the public and the environment.

Kinder Morgan is one of the largest pipeline transportation companies in the United States and operates in almost every state. Our pipelines transport natural gas, gasoline, crude oil, CO2 and other products. We monitor our operations 24-hours a day, every day. We continually seek to ensure public safety

and safe pipeline operations through employee training, regular testing, right-of-way aerial and foot patrols and adherence to our comprehensive Integrity Management plan and procedures.

Kinder Morgan's Public Awareness Program – developed under the guidance of federal public awareness, damage prevention and integrity management regulation – is a single administered program for all applicable business units or entities.

## PIPELINE SAFETY

Kinder Morgan is committed to public safety, protection of the environment, and operation of its facilities in compliance with all applicable rules and regulations. The majority of its pipelines fall under the regulatory oversight of the U.S. Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA). The company is proud of its safety record and follows many regulations and procedures to monitor and maintain the integrity of its pipelines.

- Pipeline operating conditions are monitored 24 hours a day, 7 days a week by personnel in control centers using a Supervisory Control and Data Acquisition (SCADA) computer system. This electronic surveillance system gathers such data as pipeline pressures, volume and flow rates and the status of pumping equipments and valves. Whenever operating conditions change, an alarm warns the operator on duty and the condition is investigated. Both automated and manual valves are strategically placed along the pipeline system to enable the pipeline to be shut down immediately and sections to be isolated quickly, if necessary.
- Visual inspections of Kinder Morgan's pipeline right-of-way are conducted by air and/or ground on a regular basis. The right-of-way is a narrow strip of land reserved for the pipeline. Above ground marker signs are displayed along the right-of-way to alert the public and contractors to the existence of the pipeline.
- Internal inspections are conducted periodically by passing sophisticated

computerized equipment called "smart pigs" through most of our pipelines to confirm the wall thickness of the pipe.

- Cathodic protection is a technology designed to protect pipelines from external corrosion through the use of an electrostatic current. The small electrical charge is applied to our pipelines, which have an external protective coating.
- Kinder Morgan's Public Awareness Program is designed to prevent third-party damage to its pipelines. Additionally, the company is a member of numerous "call-before-you-dig" programs or "one-call" systems across the United States, which are designed to help the public, contractors and others identify the location of pipelines before excavation or digging projects to prevent damage to pipelines and protect the public. The leading cause of pipeline accidents is third-party damage caused by various types of digging and excavation activities.
- Emergency preparedness and planning measures are in place at Kinder Morgan in the event that a pipeline incident occurs. The company also works closely with local emergency response organizations to educate them regarding our pipelines and how to respond in the unlikely event of an emergency.

Pipelines are the most efficient and safest method by which to transport and deliver natural gas and petroleum products, and they are inherently safer than other modes of transportation such as rail, barge and truck. While the amount of natural gas and petroleum being used in the U.S. continues to increase dramatically, the industry's safety performance in recent years has improved significantly and serious accidents are rare. Pipelines help ensure a plentiful supply of natural gas to heat homes and businesses and generate electricity; gasoline to operate our cars and trucks; fuel oil to power industry and heat homes; and jet fuel for our nation's commercial and military aircraft.
