ABOUT GREENLEAF CO₂ SOLUTIONS, LLC

Greenleaf CO₂ Solutions, LLC (Greenleaf) operates gathering & transmission pipelines in Mississippi. These pipelines transport carbon dioxide and natural gas in Clarke, Jasper, and Wayne counties.

Greenleaf is committed to operational procedures and policies that meet or exceed current environmental regulations and policies. Our corporate policy is centered on compliance and spill prevention as our primary objective. We have established a proactive culture versus reactive culture as it relates to environmental compliance in general, and spill prevention, specifically.

WHAT DOES GREENLEAF DO IF A LEAK OCCURS?

Greenleaf employs tiered approach when responding to emergencies. Our employees and oil spill response contractors utilize the National Interagency Incident Management System (NIIMS) Incident Command System (ICS) to manage emergency response activities. The NIIMS-ICS is a management tool that is readily adaptable to incidents ranging from small to large. Greenleaf will use NIIMS-ICS for all incidents.

The Greenleaf Tier I, Tier II, and Tier III positions are filled by either qualified personnel from within the company or contractor personnel depending on size and location. These select company personnel carry out their assigned team duties in addition to their normal jobs. In the event these personnel are mobilized to an emergency, their response duties will supersede normal responsibilities.

MAINTAINING SAFETY AND INTEGRITY OF PIPELINES

Greenleaf invests significant time and capital maintaining the quality and integrity of their pipeline systems. Greenleaf also utilizes aerial surveillance and/or on-ground observers to identify potential dangers. Control center personnel continually monitor the pipeline system and assess changes in pressure and flow. They notify field personnel if there is a possibility of a leak.

Clarke	Wayne
Jasper	

Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.

PRODUCTS TRANSPORTED

Product: Carbon Dioxide

Leak Type: Gas

Vapors: Vapors from liquefied gas are initially heavier than air and spread along ground.

Health Hazards: Product is a simple asphyxiant and non-flammable. Vapors may cause dizziness or asphyxiation without warning and may be toxic if inhaled. Contact with gas or liquefied gas may cause burns, severe injury and/or frostbite.

Product: Natural Gas

Leak Type: Gas

Vapors: Natural Gas is colorless, odorless, tasteless, and extremely flammable. If trace amounts of sulfur compounds are added as odorant, the gas has a garlic/rotten-egg/skunk odor.

Health Hazards: Route of exposure: inhalation - can displace oxygen in the air and cause symptoms of oxygen deprivation (asphyxiation), including unconsciousness.
