The ONEOK North System is a 1,600-mile interstate common carrier pipeline system with facilities to transport, store and deliver a full range of NGL products. The North System serves the petrochemical, peak shaving, refinery and propane fuels markets as well as provides access to major underground storage facilities in the Central Kansas area

COMMITMENT TO SAFETY, HEALTH & ENVIRONMENT

ONEOK North System (ONS) manages its operations in a manner that protects the environment and the safety of employees, customers, contractors and the public, while fully complying with laws and regulations. ONS' principles and beliefs dictate that safety and environmental performance are mandatory for success and come first, no matter how urgent the job. ONS employees have the personal right, responsibility and ability to prevent accidents and adhere to ONS' culture that accidents and unauthorized releases are unacceptable.

Additionally, ONS commits to continually improve its environmental, safety, and health (ES&H) performance by proactively evaluating its operations, and implementing programs and practices to reduce the number and severity of ES&H incidents towards an ultimate goal of zero.

Accordingly, ONS is committed to providing pipeline safety and operational information to emergency response agencies that might be called upon to assist ONS in protecting the public and the environment, and in mitigating the consequences of the event.

Integrity Management Plan Overview

Safety and environmental performance is ONS' first priority. Ensuring the mechanical integrity of our pipelines helps us to successfully meet our goal of protecting employees, customers, contractors, the public and the environment. The ONS Pipeline Integrity Management Program defines how we work to achieve this goal and comply with applicable laws and regulations.

If you want additional information on Integrity Management, Emergency Response Plans, or wish to comment to ONS about public safety, protection of High Consequence Areas under your
