

WORKING TOGETHER TO KEEP OUR COMMUNITIES SAFE

Spire is a company that operates five natural gas utilities as part of its natural gas distribution business, and maintains an underground natural gas storage field as well as a liquid propane pipeline.

Underground pipes are the safest and most reliable way to transport natural gas and other petroleum products, but accidents can always happen. As Spire, we have a responsibility to the millions of homes and businesses along our pipelines to keep people in our communities safe.

We take that responsibility seriously, and we routinely monitor, patrol and inspect our pipelines via aircraft, vehicles and on foot. We also work to promote safety and pipeline awareness in the communities we serve through first-responder natural gas training courses and many customer-facing communications, including advertisements, bill inserts, customer guides and more.

With safety as our number one priority, we are committed to working with the people and first responders in our communities to maintain pipeline safety throughout the area. With working together in mind, here's a look at where our pipelines are located, how they're marked and a list of who to call in the event of an emergency.
