OPERATOR OVERVIEW

Tucker Energy Solutions, LLC offers fully integrated, turnkey pipeline operation, management, maintenance, and construction services to pipeline owners and operators, local distribution companies, and independent power, oil and gas producers in the US.

Tucker Energy Solutions, LLC is committed to the continuous improvement of Environmental, Health and Safety performance to help achieve the greatest benefit to the general public and all of our clients. It is our policy to meet or exceed all applicable environmental, health and pipeline safety laws and regulations, and to facilitate full and open discussion to address responsible standards and practices where laws and regulations do not exist.

In communities along our pipelines, local operating personnel oversee the day-to-day operations of our facilities. Following strict procedures and safety standards, our operating personnel provide our local link to the community, often working closely with our facility neighbors and others in the community.

Tucker Energy Solutions, LLC is contracted to operate a ten-mile, 6-inch, pipeline for KAAPA Ethanol Ravenna, LLC that extends from a connection with Tallgrass Energy Pipeline traversing north along Navaho Drive, crossing Highway 2 east of the intersection of Highway 2 and Navaho Drive, then proceeding to the KAAPA Ethanol plant located on Navaho Drive.

PIPELINE SAFETY

Inspections of our facilities help us detect potential problems before they become safety concerns. These inspections, many of which are prescribed by law, include detailed analysis of the underground corrosion protection systems along our pipelines, as well as aboveground surveys for detecting signs of leaks or other potential problems, and periodic inspections by the Fuel Safety Division of the Nebraska State Fire Marshal.

Our operating personnel are constantly on the alert for third party excavators who may unknowingly dig near our pipelines. Damage by outside parties is the leading cause of damage to pipelines in the United States, and we work hard to protect our facilities. To help prevent outside damage, we conduct regular communications with landowners, contractors and others who might be working around the lines so that they understand precautions they should take. We also participate in state "one-call" programs, which notify utilities and other underground facility operators before people begin excavating. Our operating personnel also conduct regular face-to face meetings with local community officials and emergency responders to discuss the nature of our facilities and our operations, as well as the cooperative steps to be taken in the event of a natural gas emergency.

Preventing excavation damage to the nation's pipeline network is a top priority for the U.S. Department of Transportation's Pipe-

line and Hazardous Materials Administration (PHMSA). Working with facility operators, state and local governments, excavators, property owners, and concerned citizens, PHMSA and the pipeline industry have developed a comprehensive damage prevention program to protect underground facilities.

To prevent excavation damage to all utilities including pipelines, all 50 states have instituted "One Call" Programs. The programs provide telephone numbers for anyone doing excavation to call before they begin. The One Call operator will notify underground facility operators of any planned excavation so that the company can flag the location of its facilities and assign personnel to be present during excavation, if necessary.

To reach your local one-call center, regardless of where you are digging, you can also call "811" which should direct you to your local one-call center. If, for some reason, you can't connect to your one-call center by dialing 811, you may dial **1-888-258-0808** to get the toll-free direct-dial number. Every digging job requires that you call - even small projects like planting trees or shrubs. If you hit an underground utility line while digging, you can harm yourself or those around you, disrupt service to an entire neighborhood and potentially be responsible for fines and repair costs.

Pipeline companies use markers like those shown to indicate the approximate location of a pipeline or pipelines. Markers identify

the pipeline company, product type and have a 24-hour emergency telephone number for the pipeline operator. Markers indicate the general, not exact, location of a pipeline. Never rely solely on the presence or absence of pipeline markers. Always call your state's One-Call notification service or dial 811 before digging. Pipeline markers are important to public safety. It is a federal crime for any person to willfully deface, damage, remove, or destroy any pipeline sign or right-of-way marker required by federal law.
