**ABOUT IMTT EPIC LLC**

IMTT Epic LLC, a leading independent liquid bulk storage and logistics solutions provider. IMTT Epic successfully bridges the gap between supply and demand centers through efficient logistics planning and expert management. With a flexible approach to every customer’s unique requirements, IMTT Epic manages the storage and transportation requirements for many of the world’s leading market participants.. We will always focus on protecting the environment and 100% compliant operations. Our top priority is to ensure the safety of every single person who enters our facilities. We are always looking to grow our facilities and add to our network of terminals.

**MAINTAINING SAFETY AND INTEGRITY OF PIPELINES**

IMTT Epic LLC invests significant time and capital maintaining the quality and integrity of their pipeline systems. IMTT Epic LLC also utilizes aerial surveillance and/or on-ground observers to identify potential dangers. They notify field personnel if there is a possibility of a leak. Mainline block valves are sometimes utilized to isolate a leak.

IMTT Epic LLC has developed a supplemental hazard and assessment program known as an Integrity Management Program (IMP). IMPs have been implemented for areas designated as “high consequence areas” in accordance with federal regulations. Specific information about an IMTT Epic LLC’s program may be found by contacting them directly.

**EMERGENCY PREPAREDNESS FOR EMERGENCY AND PUBLIC OFFICIALS**

IMTT Epic LLC provides training annually for emergency and public officials. Company personnel and emergency responders are trained to protect life, property and facilities in the case of an emergency. For more information on emergency response plans, please contact us directly. The following guidelines are designed to ensure the

safety of those in the area if a petroleum product or natural gas pipeline leak is suspected or detected:

- **Secure the area around the leak to a safe distance.** Because vapors from the products carried in pipelines can migrate great distances, it is important to remove all ignition sources from the area. Keep in mind, Highly Volatile Liquid (HVL) vapors are heavier than air and can collect in low areas such as ditches, sewers, etc. If safe, evacuating people from homes, businesses, schools and other places of congregation, as well as controlling access to the site may be required in some incident scenarios. Sheltering in place may be the safest action if the circumstances make going outdoors dangerous.
- **Establish a command center.** Work with IMTT Epic LLC as you develop a plan to address the emergency. The pipeline operator will need to know:
  - Your contact information and the location of the emergency
  - Size, characteristics and behavior of the incident, and if there are any primary or secondary fires
  - Any injuries or deaths
  - The proximity of the incident to any structures, buildings, etc.
  - Any environmental concerns such as bodies of water, grasslands, endangered wildlife and fish, etc.
- **Evacuate or shelter in place.** Depending on the level of chemical, natural gas, or product, and whether or not the product was released, or other variables, it may be necessary to evacuate the public or have the public shelter in place. Evacuation route and the location of the incident will determine which procedure is required, but both may be necessary. Evacuate people upwind of the incident if necessary. Involving the pipeline company may be important in making this decision.

For more information about how to attain a copy of our Emergency Response Plan, please contact IMTT Epic LLC directly.

**WHAT DOES IMTT EPIC LLC DO IF A LEAK OCCURS?**

To prepare for the event of a leak, IMTT Epic LLC regularly communicates, plans and trains with local emergency responders. Upon the notification of an incident or leak IMTT Epic LLC will immediately dispatch trained personnel to assist emergency responders. IMTT Epic LLC and emergency responders are trained to protect life, property and facilities in the case of an emergency. IMTT Epic LLC will also take steps to minimize the amount of product that leaks out and to isolate the pipeline emergency.

**HOW WOULD YOU KNOW WHERE A PIPELINE IS?**

Most pipelines are underground, where they are more protected from the elements and minimize interference with surface uses. Even so, pipeline rights-of-way are clearly identified by pipeline markers along pipeline routes that identify the approximate—NOT EXACT—location of the pipeline. Every pipeline marker contains information identifying the company that operates the pipeline, the product transported, and a phone number that should be called in the event of an emergency. Markers do not indicate pipeline burial depth, which will vary. Markers are typically seen where a pipeline intersects a street, highway or railway. For any person to willfully deface, damage, remove, or

destroy any pipeline marker is a federal crime.

**Pipeline Marker** — This marker is the most common. It contains operator information, type of product, and an emergency contact number. Size, shape and color may vary.

**Aerial Marker** — These skyward facing markers are used by patrol planes that monitor pipeline routes.

**Casing Vent Marker** — This marker indicates that a pipeline (protected by a steel outer casing) passes beneath a nearby roadway, rail line or other crossing.

**CALL BEFORE YOU DIG. IT'S THE LAW!**

One easy FREE phone call to 811 starts the process to get your underground pipelines and utility lines marked. When you call 811 from anywhere in the country, your call will be routed to your state One-Call Center. Once your underground lines have been marked for your project, you will know the approximate location of

your pipelines and utility lines, and can dig safely. More information regarding 811 and One-Call laws in your state can be found at [www.call811.com](http://www.call811.com).

**HOW WOULD YOU RECOGNIZE A PIPELINE LEAK?**

- **Sight:** Liquid pools, discolored or abnormally dry soil/vegetation, continuous bubbling in wet or flooded areas, an oily sheen on water surfaces, and vaporous fogs or blowing dirt around a pipeline area can all be indicative of a pipeline leak. Dead or discolored plants in an otherwise healthy area of vegetation or frozen ground in warm weather are other possible signs.
- **Sound:** Volume can range from a quiet hissing to a loud roar depending on the size of the leak and pipeline system.
- **Smell:** An unusual smell, petroleum odor, or gaseous odor will sometimes accompany pipeline leaks. Natural Gas and Highly Volatile Liquids are

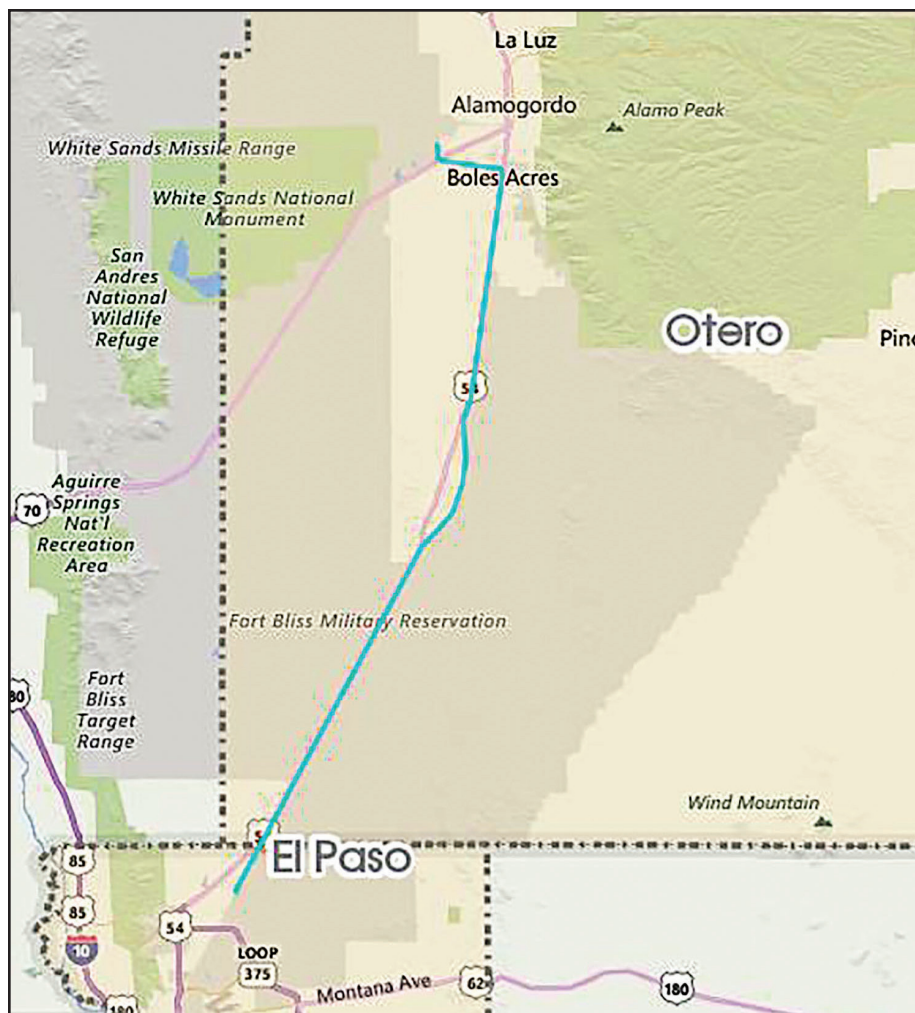

colorless, tasteless and odorless unless commercial odorants or Mercaptan is added. Gas transmission/gas gathering pipelines are odorless, but may contain a hydrocarbon smell.

**WHAT TO DO IN THE EVENT A LEAK WERE TO OCCUR:**

- **Turn off** any equipment and eliminate any ignition sources without risking injury.
- **Leave the area** by foot immediately. Try to direct any other bystanders to leave the area. Attempt to stay upwind.
- From a safe location, notify IMTT Epic LLC immediately and call 911 or your local emergency response number. The operator will need your name, your phone number, a brief description of the incident, and the location so the proper response can be initiated.

**WHAT NOT TO DO IN THE EVENT A LEAK WERE TO OCCUR:**

- **DO NOT** cause any open flame or other potential source of ignition such as an electrical switch, vehicle ignition, light a match, etc.
- **DO NOT** start motor vehicles or electrical equipment.
- **DO NOT** not ring doorbells to notify others of the leak. Knock with your hand to avoid potential sparks from knockers.
- **DO NOT** come into direct contact with any escaping liquids or gas.
- **DO NOT** drive into a leak or vapor cloud while leaving the area.
- **DO NOT** attempt to operate any pipeline valves yourself. You may inadvertently route more product to the leak or cause a secondary incident.
- **DO NOT** attempt to extinguish a petroleum product or natural gas fire. Wait for local firemen and other professionals trained to deal with such emergencies.
