

## ABOUT WEST LORAIN POWER

West Lorain Power, located in Lorain, Ohio, is a privately-held 555 MW (2 x 65 MW, 5 x 85 MW) power generation company, with a periodic-start, fuel-oil and natural-gas-fired generation plant and occupies about 500 acres of land in Lorain.

## WHAT DOES WEST LORAIN POWER DO IF A LEAK OCCURS?

To prepare for the event of a leak, pipeline companies regularly communicate, plan and train with local emergency responders. Upon the notification of an incident or leak, the pipeline company will immediately dispatch trained personnel to assist emergency responders. Pipeline operators and emergency responders are trained to protect life, property and facilities in the case of an emergency. Pipeline operators will also take steps to minimize the amount of product that leaks out and to isolate the pipeline emergency.

We ask for your help in identifying possible gas leaks and reporting any activity on or near our rights-of-way which might cause damage to our pipeline.

Additionally, we will:

1. Shut down the pipeline and isolate the problem
2. Identify hazards
3. Excavate and repair the damaged pipeline

## MAINTAINING SAFETY AND INTEGRITY OF PIPELINES

West Lorain Power invests significant time and capital maintaining the quality and integrity of their pipeline systems. Most active pipelines are monitored 24 hours a day via manned control centers. West Lorain Power utilizes on-ground observers to identify potential dangers. Control center personnel continually monitor the pipeline system and assess changes in pressure and flow. They notify field personnel if there is a possibility of a leak. Gas transmission and hazardous liquid pipeline operators have developed supplemental hazard and assessment programs known as Integrity Management Programs (IMPs). Specific information about West Lorain Power's program may be found by contacting us directly.

## PRODUCTS TRANSPORTED

PRODUCT	LEAK TYPE	VAPORS
NATURAL GAS	Gas	Lighter than air and will generally rise and dissipate. May gather in a confined space and travel to a source of ignition.
HEALTH HAZARDS		Will be easily ignited by heat, sparks or flames and will form explosive mixtures with air. Vapors may cause dizziness or asphyxiation without warning and may be toxic if inhaled at high concentrations. Contact with gas or liquefied gas may cause burns, severe injury and/or frostbite.
