

ABOUT FELIX MIDSTREAM

Felix Midstream is a private midstream gathering company in the Delaware Basin and a wholly owned subsidiary of Felix Energy. We operate pipeline ranging from 4-in to 12-in in diameter. From engineering and construction to operations and maintenance, safety is our primary concern. Our team has constant surveillance on our system and is trained to act quickly to effectively manage any incidents that may occur.

CALL BEFORE YOU DIG. IT'S THE LAW!

Because even relatively minor excavation activities like landscaping or fencing can cause damage to a pipeline, its protective casing and/or buried utility lines, always contact your state One-Call Center before engaging in any excavation, construction, farming or digging. Most states require two working days notice to the One-Call Center to allow the utility operators to mark their pipelines and utilities at your proposed digging site. In fact, most serious damage done to pipelines is done when a third party inadvertently excavates, blasts or drills within a pipeline right-of-way. By contacting the One-Call Center first, this type of damage can be prevented. Sometimes pipeline companies will require a representative present to monitor the safe excavation.

One easy **FREE** phone call to 811 starts the process to get your underground pipelines and utility lines marked. When you call 811 from anywhere in the country, your call will be routed to your state One-Call Center. Once your underground lines have been marked for your project, you will know the approximate location of your pipelines and utility lines, and can dig safely. More information regarding 811 can be found at www.call811.com.

HOW WOULD YOU KNOW WHERE THE PIPELINE IS?

Most pipelines are underground, where they are more protected from the elements and minimize interference with surface uses. Even so, pipeline rights-of-way are clearly identified by pipeline markers along pipeline routes that identify the approximate—NOT EXACT—location of the pipeline. It also contains Felix Midstream company information, type of product transported, and the emergency contact number.

Markers do not indicate pipeline burial depth, which will vary.

WHAT DOES FELIX MIDSTREAM DO IF A LEAK OCCURS?

To prepare for the event of a leak, Felix Midstream personnel regularly communicate, plan and train with local emergency responders. Upon the notification of an incident or leak Felix Midstream will immediately dispatch trained personnel to assist emergency responders. Felix Midstream personnel and emergency responders are trained to protect life, property and facilities in the case of an emergency. Felix Midstream personnel will take steps to minimize the amount that leaks out and to minimize the impact to the surrounding community.

HOW WOULD YOU RECOGNIZE A PIPELINE LEAK?

- **Sight:** Oily or rainbow sheen on water surface, water bubbling or being blown into the air, a pool of liquid on the ground, dead or discolored vegetation amongst healthy plants, and flames near a pipeline.
- **Sound:** Hissing or gurgling sound near a pipeline.
- **Smell:** A petroleum odor.

Ward	

Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.

WHAT TO DO IN THE EVENT A LEAK WERE TO OCCUR:

- **Turn off** all equipment and eliminate any ignition sources without risking injury.
- **Leave the area** by foot immediately. Try to direct any other bystanders to leave the area. Attempt to stay upwind.
- From a safe location, notify Felix Midstream immediately and **call 911** or your local emergency response number. Felix Midstream and the 911 operator will need your name, your phone number, a brief description of the incident, and the location so the proper response can be initiated.

WHAT NOT TO DO IN THE EVENT A LEAK WERE TO OCCUR:

- **DO NOT** cause any open flame or other potential source of ignition such as an electrical switch, vehicle ignition, light a match, etc. Do not start motor vehicles or electrical equipment. Do not ring doorbells to notify others of the leak. Knock with your hand to avoid potential sparks from electric doorbells.
- **DO NOT** come into direct contact with any escaping liquids or vapors.
- **DO NOT** drive into a leak or vapor cloud while leaving the area.

- **DO NOT** attempt to operate any pipeline valves yourself. You may inadvertently route more product to the leak or cause a secondary incident.
- **DO NOT** attempt to extinguish a petroleum product fire. Wait for local firemen and other professionals trained to deal with such emergencies.

MAINTAINING SAFETY AND INTEGRITY OF PIPELINES

Felix Midstream invests significant time and capital maintaining the quality and integrity of their utility system. The system is monitored 24 hours a day. Felix Midstream also utilizes ground surveillance patrolling to identify potential dangers. Field personnel are immediately notified if there is a possibility of a leak. System valves can be utilized to isolate a leak.

WHAT TO DO IN CASE OF DAMAGING/DISTURBING A PIPELINE

State laws require you to maintain a minimum clearance, or tolerance zone, on either side of the pipeline, between the point of excavation and a marked pipeline. Check with your state one-call for tolerance zone requirements in your state.

If you cause or witness even minor damage to a pipeline or its protective coating, please immediately notify the pipeline company. Even a small disturbance to a pipeline may cause a future leak. A gouge, scrape, dent or crease is cause enough for the company to inspect the damage and make repairs.

PLANNING, ZONING AND PROPERTY DEVELOPMENT

It is crucial to coordinate with Felix Midstream to take the location of the

pipeline into consideration in land use plans, zoning, and property development activities. Property developments can make use of pipeline easements as open spaces and greenway connectors. Pipeline depth is a crucial consideration during development planning to ensure costs for lowering or relocation are identified. Changes to the topography on either side of the pipeline may impose unacceptable stresses on the pipeline. Felix Midstream would like to help in the coordination during the development of site plans where large numbers of people congregate, e.g. schools, churches, and shopping centers.

WHAT IS A RIGHT-OF-WAY AND CAN I BUILD OR DIG ON IT?

Felix Midstream works diligently to establish written agreements, or easements, with landowners to allow for ease of construction and maintenance when they cross private property. Rights-of-way (ROW) are often recognizable as corridors that are clear of trees, buildings or other structures except for the pipeline markers. A ROW may not have markers clearly present and may only be indicated by cleared corridors of land, except where farm land or crops exist. County Clerk's Offices also have record of easements which are public record.

Encroachments upon the pipeline right-of-way inhibit Felix Midstream's ability to reduce the chance of third-party damage, provide right-of-way surveillance and perform routine maintenance and required federal/state inspections. In order to perform these critical activities, Felix Midstream maintenance personnel must be able to easily and safely access the pipeline right-of-way, as well as areas on either side of the pipeline. Keeping trees, shrubs, buildings, fences, structures and any other encroachments well away from the pipeline ensures that the pipeline integrity and safety are maintained.

For questions concerning the pipeline or right-of-way or about future property improvements or excavations, contact Felix Midstream at (720) 974-2806.

PIPELINE PURPOSE AND RELIABILITY

According to National Transportation Safety Board statistics pipelines are the safest and most efficient means of transporting petroleum products, which are used to supply the energy we use. These pipelines transport hundreds of billions of ton/miles of liquid petroleum products in the United States each year.

TRANSMISSION PIPELINE MAPPING

The National Pipeline Mapping System (NPMS) is a geographic information system created by the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration (PHMSA) in cooperation with other federal and state governmental agencies and the pipeline industry to provide information about pipeline operators and their pipelines. The NPMS Web site is searchable by ZIP Code or by county and state, and can display a county map that is printable.

Within the NPMS, PHMSA has developed the Pipeline Integrity Management Mapping Application (PIMMA) for use by pipeline operators and federal, state, and local government officials only. The application contains sensitive pipeline infrastructure information that can be viewed via internet browser. Access to PIMMA is limited to federal, state, and local government officials as well as pipeline operators. PIMMA access cannot be given to any person who is not a direct employee of a government agency.

For a list of pipeline operators with transmission pipelines in your area and their contact information or to apply for PIMMA access, go to <https://www.npms.phmsa.dot.gov/ApplyForPIMMAAccess.aspx>. Operators of production facilities, liquid gathering piping and distribution piping, are not represented by NPMS nor are they required to be.

HOW CAN YOU HELP?

While accidents pertaining to Felix Midstream's pipeline facilities are rare, awareness of the location of the pipeline, the potential hazards, and what to do if a leak occurs can help minimize the number of accidents. When routine construction occurs, the stakeholders in the right-of-way will be notified. A leading

cause of pipeline incidents is third-party excavation damage. Felix Midstream is responsible for the safety and security of their pipelines. To help maintain the integrity of its pipeline and rights-of-way, it is essential that pipeline and facility neighbors protect against unauthorized excavations or other destructive activities. Here's what you can do to help:

- Become familiar with Felix Midstream's pipeline and pipeline facilities in the area (marker signs, fence signs at gated entrances, etc).
- Record Felix Midstream's contact information and any pipeline information from nearby marker/facility signs and keep in a permanent location near the telephone.
- Be aware of any unusual or suspicious activities or unauthorized excavations taking place within or near the pipeline right-of-way or pipeline facility; report any such activities to Felix Midstream and the local law enforcement.

EMERGENCY RESPONDER ACTIONS IN A PIPELINE EMERGENCY

The following guidelines are designed to ensure the safety of those in the area if a petroleum product pipeline leak is suspected or detected:

- **Public safety and environmental protection are the top priorities in any pipeline emergency response.**
- **Secure the area around the leak to a safe distance.** Because vapors

from the products carried in pipelines can migrate great distances, it is important to remove all ignition sources from the area. If safe, evacuating people from homes, businesses, schools and other places of congregation, as well as controlling access to the site may be required in some incident scenarios. Sheltering in place may be the safest action if the circumstances make going outdoors dangerous.

- **Establish a command center.** Work with Felix Midstream representatives as you develop a plan to address the emergency. Felix Midstream will need to know:
 - Your contact information and the location of the emergency
 - Size, characteristics and behavior of the incident, and if there are any primary or secondary fires
 - Any injuries or deaths
 - The proximity of the incident to any structures, buildings, etc.
 - Any environmental concerns such as bodies of water, grasslands, endangered wildlife and fish, etc.
- **Evacuate or shelter in place.** Depending on the quantity of product released, or other variables, it may be necessary to evacuate the public or have the public shelter in place. Evacuation route and the location of the incident will determine which procedure is required, but both may be necessary. Evacuate people

upwind of the incident if necessary. Involving Felix Midstream may be important in making this decision.

- **Felix Midstream will make their Emergency Spill Response Plan information available to Emergency Responders upon request.**

911 DISPATCH

911 Dispatch personnel play a critical role in effective response to pipeline incidents. Knowing the companies, their contact information, and the products transported in your respective jurisdiction is important for prompt and correct responses in the case of a pipeline incident. Dispatchers actions can save lives, direct the appropriate emergency responders to the scene, and protect our nations' infrastructure from additional issues that can be caused by improper response. Follow these simple guidelines in the case of a pipeline incident:

- Gather the proper information (if possible): company, product, and release characteristics
- Know the appropriate response to each product
- Know the wind direction at the time
- Warn of ignition sources if possible
- Dispatch appropriate emergency responders
- Contact Felix Midstream
