OUR OPERATIONS

Safety, operational reliability and system integrity are the core of what we do.

We take many preventative measures to promote safe, reliable operations of our natural gas pipelines and related facilities, including:

- High-quality pipeline material, anti-corrosion coatings and cathodic protection (a low-level direct current to inhibit corrosion)
- Pressure testing of new and existing pipelines
- Inspection and preventative maintenance programs
- Monitoring of pipelines and related facilities
- Frequent aerial and periodic ground surveys of the right-of-way
- Remote control valves
- Emergency response preparedness training and drills for employees and third-party emergency responders

DELIVERING ENERGY FROM WELLHEAD TO MARKET

Midcoast Energy is a full-service natural gas and natural gas liquid (NGL) midstream business headquartered in Houston, Texas.

Anadarko System

- 2,900 mi. of gathering pipe
- 12 processing plants
- 1 treatment plant
- 1,150 mmcf/d processing cap.

East Texas System

- 4,000 mi. of gathering and transmission pipe
- 4 processing plants
- 2 HCDP plants
- 885 mmcf/d processing cap.

North Texas System

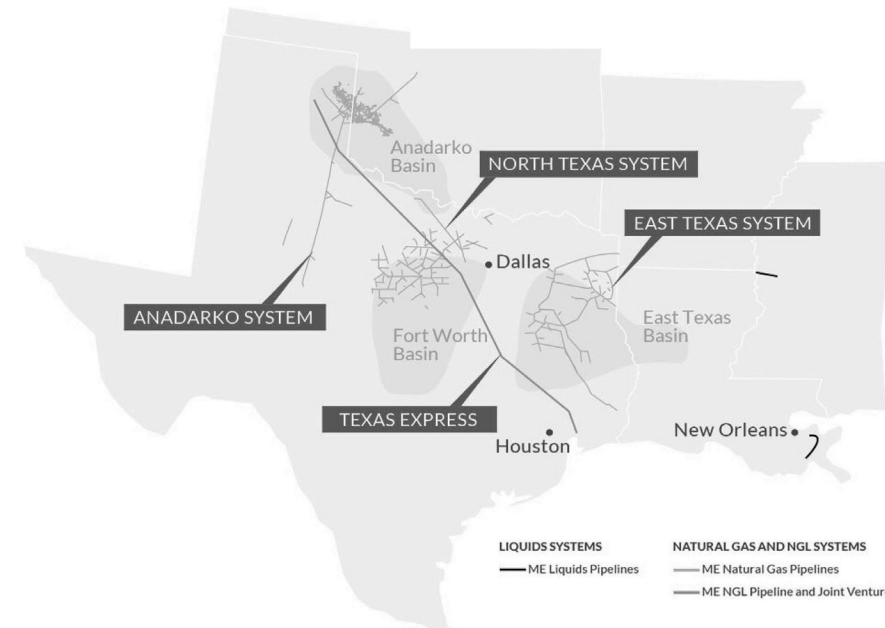

- 3,956 mi. of gathering pipe
- 5 plants
- 1 on standby
- 275 mmcf/d processing cap.

Texas Express

- 580 mi. of transmission lines with 115 mi. of natural gas liquids gathering lines
- 280,000 bpd

Roger Mills	

Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.

This segment involves our three systems -Anadarko, East Texas and North Texas - for gathering, treating, processing and transporting natural gas and NGLs. They connect established and growing gas-producing regions in Texas and Oklahoma. Our Texas Express NGL System provides takeaway from liquid rich basins in the Rockies, the mid-continent and Texas.
