

ABOUT ROSEFIELD OPERATING, LLC

Rosefield Operating, LLC (Rosefield), headquartered in The Woodlands, TX operates the High Island Pipeline System.

The High Island Pipeline System (HIPS) mainline consists of a 14" Crude Oil Mainline which extends from platform A-474 to shore, a length of approximately 79 miles. Additionally, the HIPS pipelines include 29 laterals that transport production from various platforms to the mainline for ultimate delivery to shore. They gather offshore crude and deliver it to Marathon.

Galveston Island

This section consists of 2.2 miles of 14" diameter pipe originating at the valve at the "landfall" and terminating at Galveston Bay. This section consists of 10.8 miles of 14" pipeline delivering crude from Texas City to the Texas International Terminal on Galveston Island, with the ability to delivery crude from the terminal back to Texas City.

Galveston Bay

This section consists of 3.8 miles of 14" diameter pipe originating at the originating at the south side of Galveston Bay and terminating at a Main Line valve setting at Virginia Point. Galveston Bay to Texas City Metering This section consists of 5.9 miles of 14" diameter pipe originating at the valve site at Virginia Point on the north side of Galveston Bay and terminating at the flange at the Texas City Meter Facility.

WHAT DOES ROSEFIELD OPERATING, LLC DO IF A LEAK OCCURS?

To prepare for the event of a leak, pipeline companies regularly communicate, plan and train with local emergency responders. Upon the notification of an incident or leak the pipeline company will immediately dispatch trained personnel to assist emergency responders.

Rosefield and emergency responders are trained to protect life, property and facilities in the case of an emergency.

Rosefield will also take steps to minimize the amount of product that leaks out and to isolate the pipeline emergency.

MAINTAINING SAFETY AND INTEGRITY OF PIPELINES

Rosefield invests significant time and capital maintaining the quality and integrity of their pipeline systems. Most active pipelines are monitored 24 hours a day via manned control centers. Rosefield also utilizes aerial surveillance and/or on-ground observers to identify potential dangers. Control center personnel continually monitor the pipeline system and assess changes in pressure and flow. They notify field personnel if there is a possibility of a leak. Automatic shut-off valves are sometimes utilized to isolate a leak.

Gas transmission and hazardous liquid pipeline operators have developed supplemental hazard and assessment programs known as Integrity Management Programs (IMPs). Specific information about Rosefield's program may be found by contacting us directly.

HOW TO GET ADDITIONAL INFORMATION

For additional information about Rosefield Operating, LLC call 409-948-3407.

PRODUCTS TRANSPORTED IN YOUR AREA

PRODUCT	LEAK TYPE	VAPORS
CRUDE OIL	Liquid	Initially heavier than air and spread along ground and collect in low or confined areas. Vapors may travel to source of ignition and flash back. Explosion hazards indoors, outdoors or in sewers.
HEALTH HAZARDS		Inhalation or contact with material may irritate or burn skin and eyes. Fire may produce irritating, corrosive and/or toxic gases. Vapors may cause dizziness or suffocation. Runoff from fire control or dilution water may cause pollution.

The High Island Pipeline System gathers crude oil from offshore facilities and transports the crude to a facility in Texas City. The onshore portion makes landfall near Eight Mile Rd., crosses Galveston Bay and terminates at the Texas City Facility on Loop 197 South.
