ABOUT STAKEHOLDER MIDSTREAM

Based in San Antonio and founded in 2015, Stakeholder Midstream is an independent midstream oil and gas company serving producers operating in unconventional shale plays across North America. Current capabilities include in-field natural gas gathering, compression, treating and processing services; innovative NGL solutions; and crude oil gathering, transportation and storage.

Stakeholder Midstream operates under two different companies in Texas & New Mexico:

1. Stakeholder Midstream Crude Oil PL, LLC: operates San Andres Crude gathering system in Yoakum and Gaines, TX & Lea County, NM.
2. Stakeholder Gas Utility, LLC – operates Campo Viejo sour Gas Gathering System (in Yoakum, Gaines, Cochran, Hockley & Terry County Texas and Lea County NM), 6” NGL pipeline (Yoakum/Gaines, TX) and 8” residue gas pipeline (Yoakum County, TX).

WHAT DOES STAKEHOLDER MIDSTREAM DO IF A LEAK OCCURS?

To prepare for the event of a leak, Stakeholder Midstream regularly communicates, plans and trains with local emergency responders. Upon the notification of an incident or leak, Stakeholder Midstream will immediately

dispatch trained personnel to assist emergency responders. Stakeholder Midstream and emergency responders are trained to protect life, property and facilities in the case of an emergency. Stakeholder Midstream will also take steps to minimize the amount of product that leaks out and to isolate the pipeline emergency.

MAINTAINING SAFETY AND INTEGRITY OF PIPELINES

Stakeholder Midstream invests significant time and capital maintaining the quality and integrity of their pipeline systems. Stakeholder Midstream also utilizes leak surveys and on-ground observers to identify potential dangers. Pipeline personnel continually monitor the pipeline system and assess changes in pressure and flow. They notify field personnel if there is a possibility of a leak. Automatic shut-off valves are sometimes utilized to isolate a leak. Stakeholder Midstream actively participates in Texas 811 and NM811, qualified one-call centers.

HOW TO GET ADDITIONAL INFORMATION

Please call (210) 444-9664. In the event of an emergency call (844) 296-0550.

PRODUCTS TRANSPORTED AND COUNTIES INVOLVED

| Product | Description | Health and Fire Hazards | Counties Involved |
|--------------------|---|--|---|
| Natural Gas | Leak Type: Gas Vapor: Lighter than Air Very flammable and a white vapor cloud may be visible near the site of a leak. | Health: Extremely high concentrations may cause irritation or asphyxiation. Possible presence of H2S, a toxic gas. Fire Hazards: Extremely flammable and easily ignited by heat, sparks or flames. | Yoakum Hockley Gaines Terry Cochran |
| Natural Gas Liquid | Leak Type: Liquid Vapor: Greater than Air Extremely flammable liquid and vapor. May contain or release poisonous hydrogen sulfide gas. | Health: May cause damage to organs (liver, kidneys) through prolonged exposure by ingestion. Fire Hazards: Extremely flammable and easily ignited by heat, sparks or flames. | Yoakum Gaines |
| Crude Oil | Leak Type: Liquid Vapor: Heavier than air Can be flammable. Dark brown spots on the ground, dead vegetation or an oily sheen on top of the ground or floating on the surface of a body of water may indicate the presence of a leak in a crude oil pipeline system. | Health: Irritation of the eyes and skin may occur with exposure. Vapors may cause central nervous system effects. Fire Hazards: Crude oil is an extremely flammable liquid or vapor that is heavier than air. May accumulate in low areas, and may travel considerable distances to an ignition source. | Lea Yoakum |
