Williams is one of North America's largest natural gas gatherers and processors, dedicated to becoming the most reliable midstream service provider in the industry. We're focused on running large-scale assets and running them well.

Williams owns and operates approximately 400 miles of pipelines in Southeast Texas, and in the Houston Ship Channel area. These Pipelines transport (Ethane, Propane, Butane, HCL, TBA, MTBE NH3) these chemicals are important products to manufacturing industry. Williams Gulf Coast Petrochemical & Feedstock Pipelines currently has an office in Channelview Texas with thirty employees, with plans for expansion.

OUR COMMITMENT TO SAFETY, COMMUNITY AND ENVIRONMENT

Williams is committed to safety and reliability. Our assets are monitored 24 hours a day, seven days a week by highly-skilled operations personnel using sophisticated, state-of-the-art technology.

Our company has a long-standing mission to be an exceptional neighbor in the communities where we have operations. Williams' employees volunteer, donate money and serve on boards of non-profit organizations. We pride ourselves on promoting responsible development, being responsible operators and working with landowners, government and regulatory agencies.

EMERGENCY PREPAREDNESS

As partners in safety, we value the unique skills and expertise of our local emergency response organizations. Working together, the energy industry and emergency response agencies have built positive, collaborative relationships.

Company representatives meet regularly with firefighters, emergency management officials, law enforcement officers, public officials, and planning agencies to review emergency response procedures. In case of an emergency, Williams will immediately dispatch personnel to the site to help handle the emergency and to provide information to emergency responders. We will also take the necessary operating actions – starting and stopping equipment, closing and opening valves, and other steps – to minimize the impact of the emergency.

Emergency Response Plans have been developed by Williams in conjunction with existing emergency plans developed by federal, state and local authorities. These plans are presented annually to the local emergency planning organizations. For more information on our Emergency Response Plans, please call Homer Williams at (281) 457-4015.

ABOUT WILLIAMS

Williams, through its subsidiaries, finds, produces, gathers, processes and transports natural gas. Williams' operations are concentrated in the Pacific Northwest, Rocky Mountains, Gulf Coast and Eastern Seaboard. More information is available at <http://www.williams.com>.
