

COMPANY OVERVIEW

Arsenal Midstream, LLC strives to transport natural gas in a safe, reliable, compliant and cost effective manner. Our operations are within the Marcellus Shale regions of West Virginia with pipe sizes ranging from 4"- 30".

ENSURING YOUR SAFETY

When managed properly, natural gas pipelines are the safest way to transport energy. As with any type of transportation, you need to exercise caution. Possible hazards associated with an unintended release from a gas pipeline facility include gas migrating near or inside a building, natural gas fires or natural gas explosions.

Although these situations are not commonplace, it is important to review the guidelines contained in this brochure for steps that should be taken if you suspect a gas pipeline release.

Arsenal Midstream, LLC has an established emergency response plan and our employees are prepared to handle emergencies should one arise. The emergency plan is available to all emergency officials upon request.

A RIGHT-OF-WAY ON YOUR PROPERTY

Arsenal Midstream, LLC regularly inspects the rights-of-way for potential hazards, including gas and things that might block access to the pipeline. If a pipeline right-of-way is located on your property, it must be free from obstructions, including sheds, buildings, trees and tall bushes. Do not dig or store anything on or near the right-of-way without first contacting Arsenal Midstream, LLC.

**Know what's below.
Call before you dig.**

LINE MARKERS

Like other companies that transport natural gas Arsenal Midstream, LLC places pipeline markers in areas where underground pipelines are located. You will notice these markers in places where Arsenal Midstream, LLC's pipelines intersect with streets, railroads, bodies of water and high-traffic areas.

PIPELINE CASING VENTS

In addition to these markers you also might see along the roadway or in a field, small metal or plastic pipes with square or round heads on top. These are corrosion test stations, used to test the pipeline.

PHYSICAL INDICATIONS OF A PIPELINE RELEASE

- The smell of a "rotten egg" odor or off odor
- An unusual hissing or roaring sound
- Flames burning above, or coming from the ground and dead/discolored vegetation in the midst of green vegetation
- Dirt blowing from a hole in the ground
- A dry patch in a damp field
- Water bubbling or blown into the air at a body of water

PRODUCTS/DOT GUIDEBOOK ID#/GUIDE#:

Natural Gas 1971 115

WEST VIRGINIA COUNTIES OF OPERATION:

Barbour Marion
Harrison Taylor

Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.

- A rainbow sheen on water
- A white vapor cloud
- A frozen area on the ground

STEPS THAT SHOULD BE TAKEN IN THE EVENT OF A PIPELINE RELEASE AND HOW TO REPORT

1. Leave immediately the house, building and nearby area, evacuate upwind, and advise others to stay away.
2. Do not turn lights on or off or use your garage door opener.
3. Do not use your home phone or cell phone to make calls from inside or near the house, building or immediate vicinity.
4. Do not close doors or windows. Leave them open while exiting, which will allow gas to travel outside the house or building.
5. Do not light a match or anything else that could cause a spark.
6. Call Arsenal Midstream, LLC **1-877-839-6295**...and call 911 or local emergency number.
7. Wait for Arsenal Midstream, LLC to tell you it is safe to return to your house, building or property.
