SAFETY FIRST!

Purpose and Reliability

At UniSource, ensuring a safe, reliable supply of natural gas is our number one priority. Natural gas is a clean burning fossil fuel and because it is odorless, a sulfur-like odor similar to rotten eggs has been added for your safety. UniSource prides itself on delivering a reliable supply of natural gas through our facilities that are operated under strict federal and state regulated safety codes. UniSource continuously monitors and patrols our natural gas pipelines and follow strict pipeline safety procedures. UniSource personnel take seriously the responsibility for safe operation and maintenance of gas facilities. Safety is a shared responsibility. Please call **UniSource at 1-877-837-4968 or 911** if you see anything out of the ordinary regarding natural gas facilities

Awareness of Hazards and Prevention Measures

Properly handled, natural gas is a very safe, clean, efficient, and economical fuel source. However, those who use gas need to be aware of the potential hazards posed by gas, in order to protect the health and safety of themselves and the public. Carelessness with the use of natural gas could result in a fire, an explosion, carbon monoxide poisoning, or suffocation. A few other potential hazards of natural gas are:

- Escaping Gas
- Fire or Explosion
- Abnormally High Pressure
- Abnormally Low Pressure
- Low or No Odorant in Gas
- Natural Disaster / Gas Outages
- Wildfire

Damage Prevention

UniSource participates in many damage prevention activities and works closely with the Arizona 811. The leading causes of damages are results of homeowner or professional excavators failing to call prior to digging. If you are planning to build or landscape around your property, you should protect the safety of yourself and others around

the work site by calling **Arizona 811 at 811 or 1-800-782-5348** at least two working days before you dig so that all underground facilities can be marked. UniSource will locate company owned service lines at no charge, allowing you to begin your project with the assurance that your safety will not be compromised and pipelines will not be damaged. If you observe indications that a pipeline is exposed, shallow or damaged, contact UniSource.

What should I do if I smell gas or suspect a gas leak?

It is important to know and adhere to all gas pipeline safety procedures. If a gas leak is suspected either inside or outside:

- Immediately leave the area and warn others to stay away.
- Once away from the area call 911 or UniSource at 1-877-837-4968.

HOW TO GET ADDITIONAL INFORMATION

For more information about natural gas and pipelines operating in your area, you may visit our website at www.uesaz.com or contact the National Pipeline Mapping System (NPMS) at www.npms.rspa.dot.gov or The Pipeline and Hazardous Materials Safety Administration (PHMSA) website at www.phmsa.dot.gov
