The link between natural gas exploration and production and the end use customer is known as the midstream segment of the natural gas industry. DCP Midstream, headquartered in Denver, Colorado, leads the midstream segment as one of the nation's largest natural gas gatherers, the largest natural gas liquids (NGLs) producer and one of the largest NGL marketers. DCP Midstream operates in the two principal segments of the midstream natural gas industry: natural gas gathering, processing, transportation, marketing and storage; and NGL fractionation, transportation, marketing and trading. We gather raw natural gas through 67,000 miles of gathering pipeline in six of the major U.S. natural gas regions. Through our processing operations, we separate NGLs from the raw natural gas and "fractionate" the liquids into their individual ethane, propane, butane and natural gasoline components. DCP Midstream then sells its NGLs to a variety of customers, ranging from large, multi-national petrochemical and refining companies to small regional propane distributors. We store residue gas that results from processing in our 6.0 billion cubic foot storage facility, and sell it to both gas marketers and end-users, including large industrial customers and

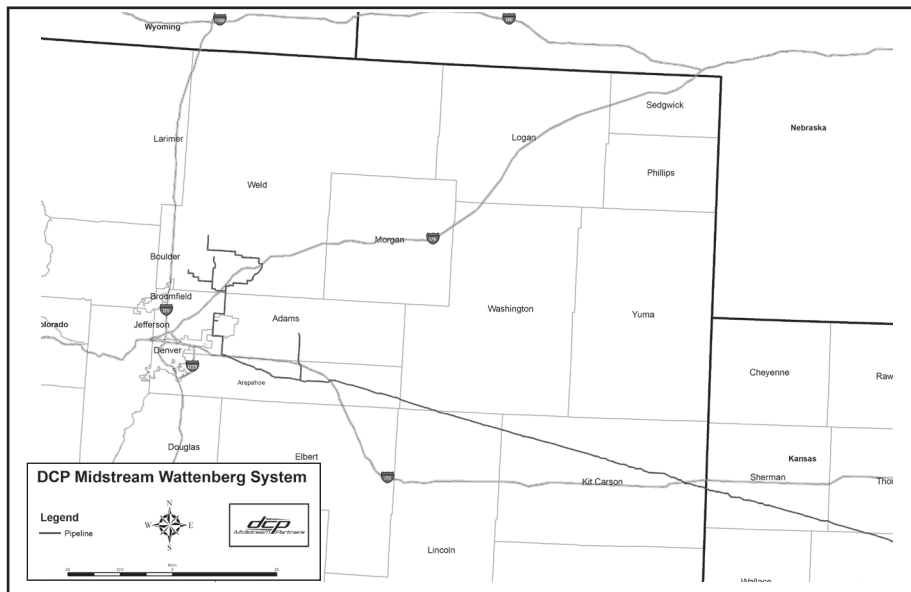

natural gas and electric utilities. On a typical day, DCP Midstream gathers (from producers' wells and transports approximately 10 trillion British thermal units of raw natural gas, produces approximately 450,000 barrels of NGLs, and markets and trades approximately 500,000 barrels of NGLs.

COMMITMENT TO SAFETY, HEALTH AND ENVIRONMENT

At DCP Midstream, we design, install, test, operate and maintain our pipelines to meet or exceed regulatory standards. We test our pipelines to withstand a higher pressure than encountered in daily use. Our employees receive regular, thorough training to safely operate and maintain our pipeline systems. As part of our ongoing damage prevention program, we patrol our pipeline right-of-way corridors by air and periodically on foot to spot potential safety problems, such as possible leaks or unauthorized construction.

DCP Midstream is committed to the safe operation of our pipelines and the protection of our employees, the public, and the environment.

PRODUCTS TRANSPORTED

Product: Natural Gas Liquids

Leak Type: Gas

Vapors: Initially heavier than air, spread along ground and may travel to source of ignition and flash back. Product is colorless, tasteless and odorless.

Health Hazards: Will be easily ignited by heat, sparks or flames and will form explosive mixtures with air. Vapors may cause dizziness or asphyxiation without warning and may be toxic if inhaled at high concentrations. Contact with gas or liquefied gas may cause burns, severe injury and/or frostbite. Fire may produce irritating and/or toxic gases.
