COMPANY PROFILE

CIPCO is a generation and transmission electric cooperative owned by member cooperatives and the communities they serve. With a balanced, 24/7 energy portfolio, CIPCO is committed to providing cost-effective, safe, and reliable energy. CIPCO and its 13 members serve over 300,000 Iowans in 58 Iowa counties. CIPCO's offices are located in Des Moines, Cedar Rapids, Creston, and Wilton, Iowa. For more information visit www.cipco.net.

COMMITMENT TO SAFETY, HEALTH & ENVIRONMENT

The safety and health of CIPCO employees and the general public is an important priority. From the executives to each person in the field, safety is a priority. All employees participate in regular safety meetings and continue to look for opportunities to make the workplace safer. CIPCO has been recognized by the National Safety Council for reaching a safety milestone of over two million hours worked over 10 years without a lost time injury.

CIPCO also carefully examines close call/near miss incidents and utilizes an incident/injury prevention program called Stop-Think-Observe-Proceed (STOP). The STOP program is designed to encourage employees to share examples of incidents when they have identified a hazard, the danger it posed, and what was done to eliminate it.

It is important CIPCO staff remain informed on safety requirements and trends in the rural electric cooperative industry. To help ensure this, CIPCO is an active member of the National Safety Council, Iowa-Illinois Safety Council, National Fire Protection Association, and the Iowa Electric Utility Safety and Training Association.

CIPCO conducts facility inspections at its generation stations and conducts field observations of transmission operations work practices. All efforts are designed to establish the safest possible work environment for our employees. The standard of performance is high, but CIPCO has repeatedly proven employees are up to the task.

CIPCO also takes the role of environmental stewardship very seriously. For decades, CIPCO has made investments in new technology for electric generation and transmission

systems to reduce the environmental impact. CIPCO has a long history of environmental compliance as well as an internal audit program that has long ensured accountability and responsibility in the environmental arena.

CIPCO employees work closely with environmental regulators on local, State, and Federal levels. CIPCO takes pride in the relationships developed with regulators over the years. These working relationships are a partnership in environmental protection.
