Atmos Energy Corporation is the nation's largest fully regulated, natural gas-only distributor of safe, clean, efficient and affordable energy. An S&P 500 company headquartered in Dallas, Atmos Energy serves more than 3 million distribution customers in over 1,400 communities across eight states and manages proprietary pipeline and storage assets, including one of the largest intrastate natural gas pipeline systems in Texas.

At Atmos Energy, our vision is to be the safest provider of natural gas services. After all, we live in the communities we serve.

Natural gas is a reliable, efficient, affordable and environmentally responsible energy source. However, our nation's existing natural gas delivery network is aging and needs to be replaced. That's why we're continuing to invest, to fortify replace and expand our system. Our spending will continue to rise as we increase the pace of pipe replacement. We're not only investing in the safety and reliability of our system, but also in the growth, economic expansion and welfare of our communities. We want everyone to enjoy the benefits of natural gas for generations to come.

Safely owning, operating and modernizing such a dynamic system requires a strong partnership between the communities we serve, the regulators who oversee our activities and the investors and creditors who

ensure we have the financial resources necessary to continue improving our system

SYSTEM SAFETY

Like most utility companies, Atmos Energy has installed pipeline over several decades and used different materials throughout our system, and some are being modernized through pipe replacement programs.

We operate our system safely and in full compliance with state and federal regulations. We do this by monitoring our system, repairing leaks, and operating an emergency hotline 24 hours a day, 7 days a week to respond and investigate reports of natural gas leaks.

EMPLOYEE SAFETY

To perform their work well, Atmos Energy personnel involved in pipeline inspection and improvement are highly trained. Field employees spend about one-fifth of their time in the classroom plus get training and education on-the-job. They also get extensive training in the safest ways to work and in keeping customers and communities safe.

PUBLIC SAFETY

We have robust safety outreach efforts through our public awareness campaigns, community involvement, and continued relationships with regulators, city leaders and first responders. We ensure our employees are trained to keep safety as our highest
