*Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.*

**COMMITMENT TO SAFETY, HEALTH & ENVIRONMENT**

South Coast Gas Co., Inc. is committed to public safety, protection of the environment, and operation of its facilities in compliance with all applicable rules and regulations. The South Coast Gas Co. pipelines fall under the regulatory oversight of the office of pipeline safety in the U. S. Department of Transportation. The company is proud of its safety record and follows many regulations and procedures to monitor and ensure the integrity of its pipelines.

Visual inspections of South Coast Gas Co.'s pipeline right-of-way are conducted by ground on a regular basis. Above ground marker signs are displayed along the right-of-way to alert the public and contractors to the existence of the pipeline.

South Coast Gas Co's public education program is designed to prevent third-party damage to its pipelines. Additionally, the company is a member of the "one-call" system in Louisiana, which is designed to help the public, contractors and others identify the location of pipelines and protect the public. The leading cause of pipeline accidents is thirdparty damage caused by various types of digging and excavation activities.

Emergency preparedness and planning measures are in place at South Coast Gas Co. in the event that a pipeline incident occurs. The company also works closely with local emergency response organizations to educate them on pipelines and how to respond to the unlikely event of an emergency.

Pipelines are the most efficient and safest method by which to transport and deliver natural gas and they are inherently safer than other modes of transportation such as rail, barge and truck. While the amount of natural gas being used in the U. S. continues to increase dramatically, serious accidents are rare. Pipelines help ensure a plentiful supply of natural gas to heat homes and businesses and generate electricity.
