

TC Energy is meeting the growing demand for energy across North America — and maximizing our pipeline infrastructure — through innovative and strategic pipeline solutions that will transport Canadian crude oil, as well as U.S. domestic crude oil to key U.S. markets in the Midwest and U.S. Gulf Coast.

KEYSTONE PIPELINE SYSTEM

The Keystone Pipeline System is a 2,639-mile pipeline system that transports crude oil from Canada to markets in the American Midwest and the U.S. Gulf Coast. The U.S. portion of the pipeline enters North Dakota, then runs south through South Dakota and Nebraska. At Steele City, Nebraska one arm of the pipeline runs east through Missouri for deliveries to Wood River and Patoka, Illinois. Another arm runs south through Oklahoma for deliveries into Cushing and continues south for deliveries into the Port Arthur and Houston, Texas areas.

PRODUCTS/DOT GUIDEBOOK ID#/GUIDE#:
Crude Oil 1267 128

NEBRASKA COUNTIES OF OPERATION:

Butler	Platte
Cedar	Saline
Colfax	Seward
Gage	Stanton
Jefferson	Wayne

Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.

COMMITMENT TO SAFETY, HEALTH & ENVIRONMENT

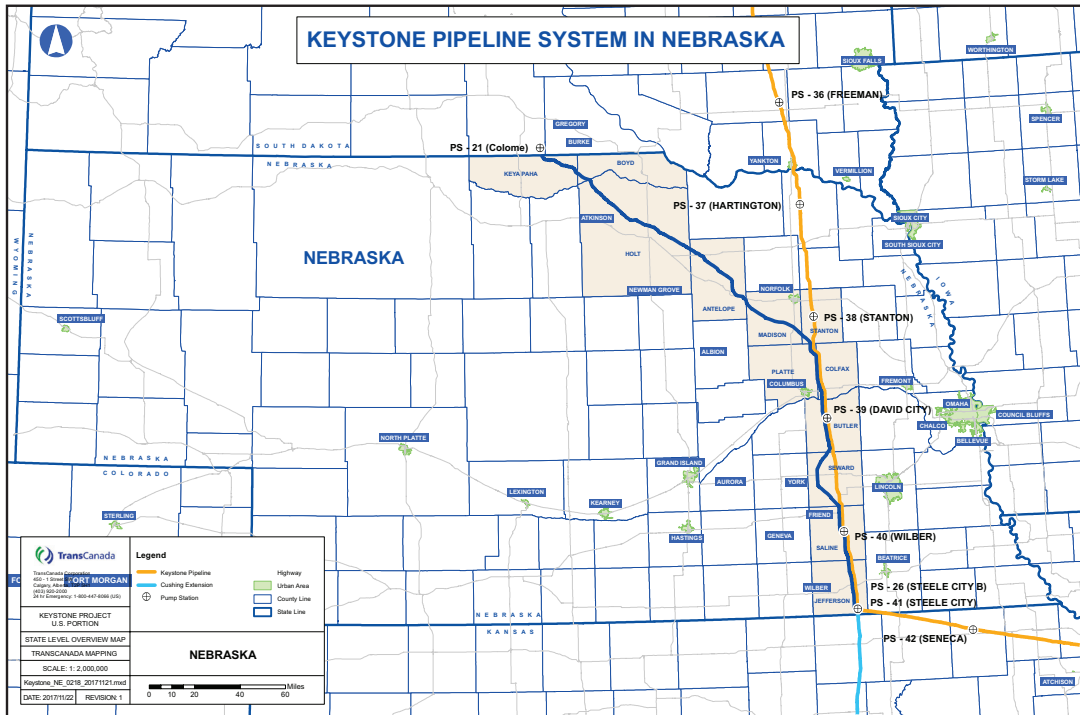

Pipeline system safeguards are in place to protect the public and prevent emergencies from occurring. Our employees, community officials and the police, fire, medical and relief agencies in your area are ready to respond to any pipeline emergency, no matter

how remote the possibility may be. TC Energy has developed a detailed Emergency Management System (EMS). We train our staff to know our systems and exactly what to do if an emergency occurs.

As part of our Public Awareness Program, we regularly inform local first responders and community officials of

what they can expect from us and how to jointly coordinate a response. We provide information and direction to safely respond to a pipeline emergency.
