

**OVERVIEW**

Targa Resources Inc. has become one of the largest providers of integrated midstream natural gas services in the country. Our extensive portfolio is strategically positioned across multiple geographic regions, producing basins, consumption and market hubs. This portfolio allows us to provide products and services spanning the midstream value chain to a broad base of customers

Field Gathering and Processing assets are located in the following areas:

- Permian Basin of West Texas and Southeast New Mexico; •Eagle Ford Shale in South Texas;
- Barnett Shale in North Texas;
- the Anadarko, Ardmore and Arkoma Basins in Oklahoma (including SCOOP and STACK) and South Central Kansas;
- and the Williston Basin in North Dakota.

The natural gas processed in this segment is supplied through our gathering systems which, in aggregate consist of approximately 28,000 miles of natural gas pipelines and include 42 owned and operated processing plants.

**IF YOU ARE A PUBLIC SAFETY OFFICIAL ...**

...you know to take whatever steps you deem necessary to safeguard the public in the event of a pipeline emergency. The following suggestions are offered as a guide:

- Secure the area around the leak to a safe distance. This could include the evacuation of people from homes, businesses, schools, and other locations, as well as the erection of barricades to control access to the emergency site and similar precautions.

*Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.*

- If the pipeline leak is not burning, take steps to prevent ignition. This could include prohibiting smoking, rerouting traffic, and shutting off the electricity and gas supply.
- If the pipeline leak is burning, try to prevent the spread of fire but do not attempt to extinguish it. Burning petroleum products: will not explode. If the fire is extinguished, gas or vapor will collect and could explode when reignited by secondary fires.
- Contact the pipeline company as quickly as possible. Pipeline marker signs show the pipeline company's name, emergency telephone number, and pipe-line contents.

**TARGA'S ACTIONS DURING AN EMERGENCY**

We will immediately dispatch personnel to the site to help handle the emergency and to provide information to public safety officials to aid in the response to the emergency. We will also take the

**IF YOU LIVE OR WORK NEAR A PIPELINE, HOW CAN YOU TELL WHERE A PIPELINE IS LOCATED? LOOK FOR THESE SIGNS:**

Located near roads, railroads and along pipeline right-of-ways

Marker for pipeline patrol plane

NOTE: Emergency phone numbers can be found on pipeline markers.

necessary operating actions: starting and stopping pumps, closing and opening valves, and similar steps to minimize the impact of the leak. Public safety personnel and others unfamiliar with the pipeline involved in the emergency should not attempt to operate any of the valves on the pipeline. Improper operation of the pipeline valves could make the situation worse and cause other accidents to happen.

### **IF YOU OR YOUR COMPANY PERFORMS EXCAVATION WORK ...**

... or if you are a homeowner or a farmer who occasionally digs on your property, we need your help in preventing pipeline emergencies. Records show that damage from excavation-related activities, particularly from equipment digging into pipelines, is the number one cause of pipeline accidents. Without proper coordination, excavation activities in the vicinity of underground pipelines can result in very dangerous situations.

**Pipeline maps available upon request**

### **LOOK FOR PIPELINE MARKERS**

To determine if there are pipelines in the area where excavation is planned, look for pipeline markers at nearby roads, railroads and fences. Don't try to guess the route or location of the pipeline from where the markers are placed. Call the pipeline company collect at the telephone number shown on the marker at least 48 hours before you dig. Most states legally require excavators to call "One-Call." They will send a representative to mark the exact location, route and depth of the pipeline at no charge.

### **WHAT TO DO IF YOU ARE DIGGING AND DISTURB A PIPELINE**

Even if you cause what seems to be only minor damage to the pipeline, notify the pipeline company immediately. A gouge, scrape, dents, or crease to the pipe or coating may cause a future break or leak. It is imperative that the pipeline owner inspects and repairs any damage to the line.
