

**ABOUT TEXOMA CRUDE OIL PIPELINE COMPANY, LLC.**

Texoma Crude Oil Pipeline Company, LLC (Texoma Pipeline), is owned and operated by ARB Midstream, LLC. Headquartered in Denver, CO ARB provides crude oil gathering services across North America that are strategically located to provide the best market access, and are tailored to our customers' specific needs. We partner with producers of all sizes to optimize their transportation options. Our assets also include a crude oil gathering system in the SCOOP and STACK and Barnett shale plays. ARB owns and operates the Texoma Crude Oil Pipeline Company, LLC, a crude oil transmission and storage system of various size pipelines spanning nearly 800 miles in North Texas and Southern Oklahoma.

**WHAT DOES TEXOMA PIPELINE DO IF A LEAK OCCURS?**

To prepare for the event of a leak, pipeline companies regularly communicate, plan and train with local emergency responders. Upon the notification of an incident or leak the pipeline company will immediately dispatch trained personnel to assist emergency responders.

Pipeline operators and emergency responders are trained to protect life, property and facilities in the case of an emergency.

Pipeline operators will also take steps to minimize the amount of product that leaks out and to isolate the pipeline emergency.

**MAINTAINING SAFETY AND INTEGRITY OF PIPELINES**

Texoma Pipeline invests significant time and capital maintaining the quality and integrity of their pipeline systems. Texoma Pipeline also utilizes aerial surveillance and/or on-ground observers to identify potential dangers. Texoma Pipeline personnel continually monitor the pipeline system and assess changes in pressure and flow. They will immediately respond if there is a possibility of a leak.

Automatic shutoff valves are sometimes utilized to isolate a leak. Hazardous liquid pipeline operators have developed supplemental hazard and assessment programs known as Integrity Management Programs (IMPs). Specific information about Texoma Pipelines program may be found by contacting us directly.

**PRODUCTS TRANSPORTED IN YOUR AREA**

PRODUCT	LEAK TYPE	VAPORS
CRUDE OIL	Liquid	May ignite on surfaces at temperatures above auto-ignition temperature. Flammable vapors may be present even at temperatures below the flash point. This material is a static accumulator. Even with proper grounding and bonding, this material can still accumulate an electrostatic charge. If sufficient charge is allowed to accumulate, electrostatic discharge and ignition of flammable air-vapor mixtures can occur.
HEALTH HAZARDS		Inhalation or contact with material may irritate or burn skin and eyes. Fire may produce irritating, corrosive and/or toxic gases. Vapors may cause dizziness or suffocation. Runoff from fire control or dilution water may cause pollution.
