

**PENNSYLVANIA
GENERAL ENERGY**

ABOUT PENNSYLVANIA GENERAL ENERGY, CO. L.L.C.

Pennsylvania General Energy Co., L.L.C. (PGE), headquartered in Warren, PA has a natural gas gathering system spanning approximately 100 miles within Pennsylvania.

WHAT DOES PGE DO IF A LEAK OCCURS?

To prepare for the event of a leak, pipeline companies regularly communicate, plan and train with local emergency responders. Upon the notification of an incident or leak the pipeline company will immediately dispatch trained personnel to assist emergency responders.

Pipeline operators and emergency responders are trained to protect life, property and facilities in the case of an emergency.

Pipeline operators will also take steps to minimize the amount of product that leaks out and to isolate the pipeline emergency.

MAINTAINING SAFETY AND INTEGRITY OF PIPELINES

PGE invests significant time and capital maintaining the quality and

integrity of their pipeline systems. The pipelines are monitored either by a visual inspection or observing gas flow at various meter/sales point stations. This is accomplished throughout the normal work day operations by both field personnel conducting their various duties in the areas of production operations and dispatchers monitoring pipeline operations remotely by computer. Yearly a visual inspection is conducted on all pipelines ensuring that there is no right of way damage and that the integrity of the pipe is sound. In an instance of over flow or high pressure situation there are ESD (Emergency Shut Down) valves in place at all well pads, meter stations and compressors.

PRODUCTS TRANSPORTED

Product: Natural Gas

Leak Type: Gas

Vapors: Lighter than air and will generally rise and dissipate. May gather in a confined space and travel to a source of ignition.

Health Hazards: Will be easily ignited by heat, sparks or flames and will form explosive mixtures with air. Vapors may cause dizziness or asphyxiation without warning and may be toxic if inhaled at
