Website: www.atmosenergy.com

Atmos Energy Corporation is one of the largest natural gas distribution companies in the United States, delivering natural gas to more than 3 million residential, commercial, industrial and public-authority customers. Our regulated distribution services are provided to more than 1,400 communities in 9 states.

Atmos Energy has grown from 279,000 customers in 1983 mainly by acquiring utility assets.

Because of the geographical breadth of our operations, we benefit from diversity in economic conditions, weather patterns, gas supplies and regulatory climates.

Atmos Energy's nonregulated operations are ranked as one of the leading domestic mid-tier gas marketers. They market natural gas to industrial customers and municipalities in some states, arrange for gas transportation and management service, and manage company-owned gas storage and pipeline assets.

COMMITMENT TO SAFETY, HEALTH & ENVIRONMENT

Safety is always Atmos Energy's primary goal. We believe that nothing can justify endangering our customers, our communities or our employees. Safety at Atmos Energy is the responsibility of every employee regardless of his or her position. Atmos Energy is committed to:

- Providing a safe, healthy and stable work environment for all employees
- Delivering safe, reliable and efficient service to its customers
- Enhancing general public safety through safe work practices and public education
- Complying with federal, state and local regulations as they pertain to Atmos Energy's daily operations

Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.

Atmos Energy Pipeline Markers and Signs

A. Pipeline Markers are placed along the Right of Way, at Road Crossings, at Railroad Crossings and where each pipeline enters or leaves a fenced facility. Any one of three types of markers shown below is located above and near the pipeline centerline.

- Marker signs may be attached to fence posts or to facility fencing.
- Marker “bullet” post may be over metal fence post or stand alone.
- Marker “slat” post may be used in lieu of either above marker type.

B. Shown below are 3 & 1 Danger signs that are located along the perimeter of gas facilities, and at roadway entrance gates. These signs are to warn visitors and inform Emergency Responders of high pressure natural gas precautions.
