COMPANY PROFILE

bpx energy, bp’s US onshore oil and gas business, is one of the leading onshore producers and suppliers of oil and natural gas in the United States and major investor in US energy development. Our primary U.S. production operations are located in Louisiana and Texas. In all of its onshore operations, bpx energy is committed to ongoing development of secure U.S. energy supplies and is working with stakeholders, as well as local state and federal officials, to increase the supply of clean-burning natural gas and additional oil resources to US markets.

COMMITMENT TO SAFETY, HEALTH AND ENVIRONMENT

Safety is the foundation of everything bpx energy does, every single day. Its goals are clear: no accidents, no harm to people and no damage to the environment. That’s a huge responsibility — one bpx energy does not take for granted.

Whether looking at oil and gas production or refining and petrochemicals, bpx energy’s rate of Tier 1 events are below the published industry sector average. bpx energy is proud of this progress but also recognizes that it cannot rest on past achievements. Complacency undermines safety, which is why bpx energy is working every day to become even better, even safer. Even as bpx energy has prepared to respond to an accident, it also has worked hard to ensure that such a response is never needed. Among its many initiatives are:

- Visual inspections of bpx energy’s pipeline right-of-ways are conducted by airplanes, drones and/or ground patrols.
- Above ground marker signs are displayed along the right-of-ways to alert the public and contractors to the existence of our pipelines.

- Internal pipeline inspections are conducted periodically by sophisticated computerized equipment called “smart pigs”.
- Cathodic Protection on our pipelines protects them from external corrosion through the use of an electrostatic current.
- bpx energy is a member and/or participant of numerous damage prevention associations and a member of the “one-call” systems in every state in which we have pipeline facilities within.
- Emergency preparedness and planning measures are in place at bpx energy in the event that a pipeline incident occurs. The company also works closely with local emergency response organizations to educate them regarding our pipelines and how to respond in the unlikely event of an emergency. For more information regarding bpx energy’s emergency response plans and procedures, contact us at bpDamagePrevention@bp.com
- You can find out where our pipelines and other companies’ pipelines are in your area by going to the National Pipeline Mapping System website at www.npms.phmsa.dot.gov.
