## ABOUT BRAZOS MIDSTREAM

Brazos Midstream, headquartered in Fort Worth, TX is a natural gas transmission and crude oil system spanning over 30 miles in Ward, Pecos, Loving, and Reeves Counties, TX.

Brazos Midstream employees and its pipeline system and facilities are located in the Pecos – Cayanosa area.

The Brazos Midstream Comanche Plant system is comprised of numerous Gathering Pipelines used to collect Natural Gas and Crude Oil from production operations and transport to central points for delivery to associated markets. Compressor stations and pumping stations are located along transmission and gathering pipeline routes and help push energy products through the line.

## WHAT DOES BRAZOS MIDSTREAM DO IF A LEAK OCCURS?

To prepare for the event of a leak, pipeline companies regularly communicate, plan and train with local emergency responders. Upon the notification of an incident or leak the pipeline company will immediately dispatch trained personnel to assist emergency responders.

Pipeline operators and emergency responders are trained to protect life, property, environment and facilities in the case of an emergency.

Pipeline operators will also take steps to minimize the amount of product that leaks out and to isolate the pipeline emergency. Brazos personnel will restrict the flow of product and implement other operating actions as needed to minimize the impact of the emergency. Public safety officials and other non-company personnel should not attempt to operate pipeline valves. Improper operation of pipeline valves can cause other accidents to occur.

## MAINTAINING SAFETY AND INTEGRITY OF PIPELINES

Brazos Midstream primary concern is safe and reliable delivery of product. According the National Transportation and Safety Board, pipelines are the safest and most economical way to transport products. We are committed to the safe operation of our pipelines in your community. Brazos invests significant time and capital maintaining the quality and integrity of their pipeline systems.

*Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.*

Gas transmission and hazardous liquid pipeline operators have developed supplemental hazard and assessment programs known as Integrity Management Programs (IMPs). Specific information about Brazos Midstream's program may be found on our Web site, or by contacting us directly at 817-332-6800.

## PRODUCTS TRANSPORTED IN YOUR AREA

PRODUCT	LEAK TYPE	VAPORS
HAZARDOUS LIQUIDS [SUCH AS: CRUDE OIL]	Liquid	Initially heavier than air and spread along ground and collect in low or confined areas. Vapors may travel to source of ignition and flash back. Explosion hazards indoors, outdoors or in sewers.
HEALTH HAZARDS		Inhalation or contact with material may irritate or burn skin and eyes. Fire may produce irritating, corrosive and/or toxic gases. Vapors may cause dizziness or suffocation. Runoff from fire control or dilution water may cause pollution.
NATURAL GAS AND NATURAL GAS LIQUIDS	Gas	Lighter than air and will generally rise and dissipate. May gather in a confined space and travel to a source of ignition.
HEALTH HAZARDS		Will be easily ignited by heat, sparks or flames and will form explosive mixtures with air. Vapors may cause dizziness or asphyxiation without warning and may be toxic if inhaled at high concentrations. Contact with gas or liquefied gas may cause burns, severe injury and/or frostbite.

## Brazos Midstream

There are several 12" Natural Gas pipelines operating at 285#, 6" and 10" Natural Gas Liquids lines operating at 2200# and 12" and 16" pipelines operating at 1440#. The system also contains 8" – 16" Gathering pipelines operating at 1440#.
