ABOUT CITGO REFINING & CHEMICALS L.P.

CITGO, headquartered in Houston, Texas, is a refinery based company. With a focus on safety and the environment, our state-of-the-art refineries transform crude oil into the products we use every day. One of CITGO's refineries is located in Corpus Christi, Texas and operates approximately 100 miles of pipelines.

WHAT DOES CITGO – CORPUS CHRISTI REFINERY DO IF A LEAK OCCURS?

In preparation for a potential leak, CITGO regularly communicates, plans and trains with local emergency responders. CITGO operators and emergency responders are trained to protect life, the environment, and property/facilities in the case of an emergency.

Upon notification of a pipeline incident or leak in the area, CITGO will immediately dispatch trained personnel to assist local emergency responders.

CITGO operators will also take steps to minimize leak volumes by isolating the pipeline leak as soon as safely possible.

MAINTAINING SAFETY AND INTEGRITY OF PIPELINES

CITGO invests significant resources to maintain the quality and integrity of their pipeline systems. Active pipelines are monitored daily by field personnel. Field personnel report any abnormal situations to their supervisors, including any abnormal conditions. CITGO also utilizes aerial surveillance and on-ground observers to identify potential dangers. Automatic and manual valves are utilized locally and remotely to isolate any potential leak source.

Gas transmission and hazardous liquid pipeline operators have developed supplemental hazard and assessment programs known as Integrity Management Programs (IMPs). Specific information about CITGO – Corpus Christi Refinery's program can be obtained by contacting us directly at the number above.
