ABOUT GOLDEN PASS PIPELINE

Golden Pass Pipeline is a joint venture company formed by affiliates of two of the world’s largest and most experienced oil and gas companies: Qatar Petroleum (70%) and ExxonMobil (30%). Working together, the two shareholders have combined expertise and resources in taking another step towards meeting the growing demand for clean-burning energy supplies.

OUR HEADQUARTERS

The Golden Pass Pipeline Headquarters offices are located in downtown Houston, Texas, at 811 Louisiana.

OUR PIPELINE

The Golden Pass Pipeline is a 69-mile long, FERC-regulated interstate pipeline originating at the Golden Pass LNG Terminal in Sabine Pass, Texas, and terminating at the Transco interconnection in Starks, Louisiana. The 42”-diameter pipeline is capable of processing an average of 2.5 billion cubic feet of natural gas per day and was designed to provide maximum flexibility for customers. The pipeline enables customers to obtain maximum sales realizations between the different markets.

With nine interconnects to intrastate and interstate pipelines, the Golden Pass Pipeline provides access to major markets, connecting to both the Houston Ship Channel and major interstate

pipelines servicing the Gulf Coast, and midwestern and northeastern United States.

WHAT DOES GOLDEN PASS PIPELINE DO IF A LEAK OCCURS?

To prepare for the event of a leak, Golden Pass Pipeline regularly communicate, plan and train with local emergency responders. Upon the notification of an incident or leak Golden Pass Pipeline will immediately dispatch trained personnel to assist emergency responders. Our pipeline operators and emergency responders are trained to protect life, property and facilities in the case of an emergency. Our pipeline operators will also take steps to minimize the amount of product that leaks out and to isolate the pipeline emergency.

MAINTAINING SAFETY AND INTEGRITY OF PIPELINES

Golden Pass Pipeline invests significant time and capital maintaining the quality and integrity of our pipeline system. Our pipeline is monitored 24 hours a day via a manned control center. Golden Pass Pipeline also utilizes aerial surveillance and/or on-ground observers to identify potential dangers. The control center personnel continually monitor the pipeline system and assess changes in pressure and flow. Automatic shut-off valves may be utilized to isolate a leak.
