Energy Transfer, a Texas-based energy company founded in 1995 as a small intrastate natural gas pipeline company, is now one of the largest and most diversified master limited partnerships in the United States.

Strategically positioned in all of the major U.S. production basins, the company owns and operates a geographically diverse portfolio of energy assets, including midstream, intrastate and interstate transportation and storage assets. Energy Transfer operates nearly 125,000 miles of natural gas, crude oil, natural gas liquids and refined products pipelines and related facilities, including terminalling, storage, fractionation, blending and various acquisition and marketing assets in 41 states.

Gulf Run Transmission is an approximately 335-mile pipeline system that transports natural gas from the Haynesville Shale in East Texas and North Louisiana to the Carthage and Perryville natural gas hubs. The pipeline system provides a direct connection and critical link between growing natural gas production in Louisiana and increased demand from Gulf Coast and international markets.
