# PERMIAN RESOURCES

## ABOUT PERMIAN RESOURCES

Permian Resources (NYSE: PR) is an independent oil and natural gas company focused on driving sustainable returns through the responsible acquisition, optimization and development of high-return oil and natural gas properties. The Company's operations are focused in the Permian Basin, with assets concentrated in the core of the Delaware Basin. Permian Resources is headquartered in Midland, Texas. Permian Resources operates gathering lines for the purpose of transporting produced product to third party purchasers, a portion of which are DOT PHMSA regulated lines.

## WHAT DOES PERMIAN RESOURCES DO IF A LEAK OCCURS?

To prepare for the event of a leak, pipeline companies regularly communicate, plan and train with local emergency responders. Upon the notification of an incident or leak the pipeline company will immediately dispatch trained personnel to assist emergency responders.

Pipeline operators and emergency responders are trained to protect life, property and facilities in the case of an emergency.

Pipeline operators will also take steps to minimize the amount of product that leaks out and to isolate the pipeline emergency.

## MAINTAINING SAFETY AND INTEGRITY OF PIPELINES

Permian Resources invests significant time and capital maintaining the quality and integrity of their pipeline systems. Its active pipelines are consistently monitored by field personnel. Permian

Resources also utilizes aerial surveillance and/or on-ground observers to identify potential dangers. Field personnel monitor the pipeline system and assess changes in pressure and flow and identify and address any possibility of a leak. Automatic shut-off valves are sometimes utilized to isolate a leak.

Gas gathering pipeline operators have developed supplemental hazard and assessment programs known as Safety Management Programs. Specific information about Permian Resources program may be found by contacting us directly.

## HOW WOULD YOU RECOGNIZE A PIPELINE LEAK?

- **Sight:** Continuous bubbling or blowing water in wet or flooded areas, oily or rainbow sheen on water surface, a pool of liquid on the ground, vaporous fogs or blowing dirt around a pipeline area or hole in the ground, dead or discolored plants in an otherwise healthy area, frozen ground in warm weather, and flames near a pipeline are all signs of a pipeline leak. Natural gas is colorless, but vapor and "ground frosting" may be visible at high pressures.
- **Sound:** Volume can range from a quiet blowing or hissing to a loud roar.
- **Smell:** A hydrocarbon or petroleum smell will sometimes accompany pipeline leaks. Natural Gas is colorless, tasteless and odorless unless commercial odorants or Mercaptan is added. Gas transmission/gas gathering pipelines are odorless, but may contain a hydrocarbon or petroleum smell.

## TEXAS COUNTIES OF OPERATION:

Reeves

*Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.*

## WHAT TO DO IN THE EVENT A LEAK WERE TO OCCUR:

- **Turn off** all equipment and eliminate any ignition sources without risking injury.
- **Leave the area** by foot immediately. Try to direct any other bystanders to leave the area. Attempt to stay upwind.
- From a safe location, notify Permian Resources immediately and call **911** or your local emergency response number. Permian Resources and the 911 operator will need your name, your phone number, a brief description of the incident, and the location so the proper response can be initiated.

## WHAT NOT TO DO IN THE EVENT A LEAK WERE TO OCCUR:

- **DO NOT** cause any open flame or other potential source of ignition such as an electrical switch, vehicle ignition, light a match, etc. Do not start motor vehicles or electrical equipment. Do not ring doorbells to

notify others of the leak. Knock with your hand to avoid potential sparks from electric doorbells.

- **DO NOT** come into direct contact with any escaping liquids or vapors.
- **DO NOT** drive into a leak or vapor cloud while leaving the area.
- **DO NOT** attempt to operate any pipeline valves yourself. You may inadvertently route more product to the leak or cause a secondary incident.
- **DO NOT** attempt to extinguish a petroleum product fire. Wait for local firemen and other professionals trained to deal with such emergencies.

**PRODUCTS TRANSPORTED**

**Product:** Crude Oil

**Leak Type:** Liquid

**Vapors:** Initially heavier than air and spread along ground and collect in low or confined areas. Vapors may travel to source of ignition and flash back. Explosion hazards indoors, outdoors or in sewers.

**Health Hazards:** Inhalation or contact with material may irritate or burn skin and eyes. Fire may produce irritating, corrosive and/or toxic gases. Vapors may cause dizziness or suffocation. Runoff from fire control or dilution water may cause pollution.

**Product:** Natural Gas

**Leak Type:** Gas

**Vapors:** Lighter than air and will generally rise and dissipate. May gather in a confined space and travel to a source of ignition.

**Health Hazards:** Will be easily ignited by heat, sparks or flames and will form explosive mixtures with air. Vapors may cause dizziness or asphyxiation without warning and may be toxic if inhaled at high concentrations. Contact with gas or liquefied gas may cause burns, severe injury and/or frostbite.
