OVERVIEW

Targa’s Grand Prix Pipeline is a Natural Gas Liquids (NGL) pipeline that was commissioned in the summer of 2019. The Grand Prix Pipeline is approximately 1,200 miles and at capacity the pipeline will be capable of transporting approximately 900,000 barrels of NGLs per day into fractionation facilities located in Mont Belvieu, Texas.

Grand Prix Pipeline begins in Eastern New Mexico and runs eastward through the Permian Basin Region of West Texas and south into Mont Belvieu, Texas. Southeast of the Dallas area, the pipeline makes a connection that reaches into Oklahoma. The recently constructed Kingfisher Extension in Oklahoma brings the Grand Prix pipeline to a total of approximately 1,200 miles.

IF YOU ARE A PUBLIC SAFETY OFFICIAL ...

...you know to take whatever steps you deem necessary to safeguard the public in the event of a pipeline emergency. The following suggestions are offered as a guide:

- Secure the area around the leak to a safe distance. This could include the evacuation of people from homes, businesses, schools, and other locations, as well as the erection of barricades to control access to the emergency site and similar precautions.
- If the pipeline leak is not burning, take steps to prevent ignition. This could include prohibiting smoking, rerouting traffic, and shutting off the electricity and gas supply.
- If the pipeline leak is burning, try to prevent the spread of fire but do not attempt to extinguish it. Burning petroleum products will not explode. If the fire is extinguished, gas or vapor will collect and could explode when reignited by secondary fires.

- Contact the pipeline company as quickly as possible. Pipeline marker signs show the pipeline company’s name, emergency telephone number, and pipe line contents.

TARGA’S ACTIONS DURING AN EMERGENCY

Technicians will immediately be dispatched to the site to help handle the emergency and to provide information to public safety officials to aid in the response to the emergency. Steps will also be taken to minimize the impact of the leak, including but not limited to: starting or stopping pumps and closing or opening valves.

Public safety personnel and others unfamiliar with the pipeline involved in the emergency should not attempt to operate any of the valves on the pipeline. Improper operation of the pipeline valves could make the situation worse and cause other accidents to happen.

IF YOU OR YOUR COMPANY PERFORMS EXCAVATION WORK ...

... or if you are a homeowner or a farmer who occasionally digs on your property, we need your help in preventing pipeline emergencies. Records show that damage from excavation-related activities, particularly from equipment digging into pipelines, is the number one cause of pipeline accidents. Without proper coordination, excavation activities in the vicinity of underground pipelines can result in very dangerous situations.

LOOK FOR PIPELINE MARKERS

Because pipelines are buried underground, markers like the ones shown in the table are used to indicate their approximate location along the route. The markers can be found where a pipeline intersects a street, highway or railway. In cities, sometimes markers are located on curbs.

Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.

Markers indicate the general location of a pipeline, but cannot be relied upon to indicate exact position of the pipeline. The pipeline may not follow a straight course between markers. And, while markers are helpful in indicating a general pipeline location, they are limited in the information they provide. For example, markers do not indicate the depth or number of pipelines in the vicinity.

The markers display the product transported in the line, the name of the pipeline operator, and a telephone

number where the operator can be reached in the event of an emergency.

WHAT TO DO IF YOU ARE DIGGING AND DISTURB A PIPELINE

Even if you cause what seems to be only minor damage to the pipeline, notify the pipeline company immediately. A gouge, scrape, dents, or crease to the pipe or coating may cause a future break or leak. It is imperative that the pipeline owner inspects and repairs any damage to the line.

**IN CASE OF EMERGENCY
Call: 800-483-9568**

For more information on the Grand Prix Pipeline, please contact any of the following people:

John Boyette

IF YOU LIVE OR WORK NEAR A PIPELINE, HOW CAN YOU TELL WHERE A PIPELINE IS LOCATED? LOOK FOR THESE SIGNS:

Located near roads, railroads and along pipeline right-of-ways

Painted metal or plastic posts

Pipeline casing vent

Marker for pipeline patrol plane

NOTE: Emergency phone numbers on signs.
