Texas Gas Service, a division of ONE Gas, provides safe, reliable and affordable natural gas to more than 680,000 customers across Texas. Natural gas is delivered to the company's distribution systems from transmission lines, some of which are owned by Texas Gas Service, at operating pressures typically between 150 psig and 1,000 psig. Natural gas is then delivered through distribution pipelines that generally operate at 60 psig or less. Texas Gas Service maintains, operates and monitors approximately 15,972 miles of transmission, distribution and service pipelines.

AUTHORIZED OPERATION OF VALVES

Do not operate any pipeline valves or equipment. If a pipeline emergency were to occur, Texas Gas Service personnel will work directly with local emergency responders. Company employees will work to restrict the flow of gas and implement other operating actions as needed to minimize the impact of the emergency.

COMMITMENT TO SAFETY, HEALTH & ENVIRONMENT

Texas Gas Service is committed to constructing and maintaining a pipeline delivery system in compliance with applicable state and federal guidelines, industry standards and safety regulations. They utilize approved pipeline integrity management techniques to monitor system performance and system reliability. In the event of a natural gas emergency, trained employees respond and adhere to an emergency response plan to protect life, property and environment.

PIPELINE SAFETY AND INTEGRITY MANAGEMENT

The company's Pipeline Integrity Management Program (IMP) meets the requirements of the Department of Transportation (DOT) CFR Part 192, Subpart 0, and the company's Distribution Integrity Management Program (DIMP) meets the requirements of DOT CFR 192, subpart P. These regulations identify specific practices, processes and procedures that company operations follow to operate effectively. The primary goal of these regulations is to assure the public of pipeline safety and system integrity. Compliance requirements also involve right-of-way surveillance, pipeline inspection and measures to monitor and control internal and external corrosion. Installation of natural gas mains, services and related facilities must also conform to specific requirements. These requirements are mandated by the Department of Transportation Title 49, CFR Part 192, entitled "The Transportation of Natural Gas and Other Gases by Pipeline." Texas Gas Service, in partnership with public safety officials, municipalities and other local jurisdictions, follows adopted codes, regulations and standards. In areas that are not covered by city code, use of the International Fuel Gas Code is encouraged.

EMERGENCY RESPONSE

Texas Gas Service staffs an emergency response center that operates 24 hours a day, 7 days a week, to respond to natural gas-related emergencies. To assist in the emergency control of natural gas, Texas Gas Service offers a variety of training programs and materials for emergency response personnel. The safety of the affected public remains a top priority.
