ABOUT US

Vaquero Midstream LLC operates a Natural Gas Gathering and Processing System located in the Southern Delaware Basin of Texas. To ensure safe operations, we monitor our pipelines, 24 hours a day, 365 days a year. In addition, we treat corrosion threats, conduct regular patrols and perform regular inspections of our pipelines and related right-of-way (ROW).

More information on Vaquero Midstream can be found at: www.vaqueromidstream.com

HOW TO RECOGNIZE A GAS PIPELINE LEAK

Although leaks on natural gas pipelines are rare, it is important to be able to recognize the proper warning signs. Note: all of these signs may not be evident at the same time.

You should look for:

- Dirt being blown or appearing to be thrown into the air
- Water bubbling or being blown into the air at a pond, creek, river or other area
- Fire coming from the ground or appearing to burn above it
- Dead or dying vegetation on or near a right-of-way in an otherwise green area
- A dry or frozen spot on a right-of-way

You can also detect a natural gas leak by listening for a roaring, blowing or hissing sound or the presence of an unusual gas or petroleum odor.

IF YOU SUSPECT A GAS PIPELINE LEAK, YOU SHOULD:

- Turn off and abandon any motorized equipment you may be operating.
- Evacuate the area quickly and cautiously.
- Warn others nearby to clear the area.
- Call your local fire or police department or 911 and the pipeline operator once you have reached a safe location. Vaquero's Operation Center is available 24 hours a day, seven days a week at 1-877-754-6413.
- DO NOT use open flames or anything that could ignite a spark (cell phones, flashlights, motor vehicles, tools, etc.).
- DO NOT attempt to operate pipeline valves, wait for a trained professional.

PIPELINE SAFETY

Pipelines have a proven safety record with more than 2 million miles of natural gas and product pipelines in the U.S. Vaquero meets or exceeds regulatory safety requirements, in many cases designing, installing and maintaining our pipelines to more stringent standards than required by the federal or state government.

After the pipelines have been installed, we conduct periodic ground or aerial inspections of our pipeline right-of-ways, narrow strips of land leased and reserved for the pipeline, to locate leaks, encroachments, excavation activities or other unusual threats along the pipeline.

We also identify our pipelines with prominent markers along right-of-ways and other locations. These important safety signs display the product being transported and our name and 24-hour emergency line, 1-877-754-6413. Markers are NOT, however, intended to show the exact location, depth or

number of pipelines located within the right-of-way. Markers should never be removed or relocated by anyone other than a pipeline operator.

**Know what's below.
Call before you dig.**

ALWAYS CALL 811 BEFORE YOU DIG!

Call 811 before any construction involving excavation or earth movement, Texas state law requires people performing excavation or construction activities to call at least 48-hours prior to digging. If Vaquero operates a pipeline in the vicinity, we will be notified and will locate and mark our pipeline with temporary flags or spray paint before you dig. Damage from excavation-related activities is the leading cause of pipeline incidents, so always call 811 before you dig. This includes starting home projects such as installing a fence, widening a driveway or planting a tree. We watch for unauthorized digging, but we request your help to notify us. If you observe any unusual or suspicious activity near our

Vaquero Midstream

pipeline facilities or in the unlikely event an emergency occurs, please call us at any time using one of the numbers listed in the document.

If while digging you strike a Vaquero pipeline or facility, you should stop immediately and contact the Vaquero Operations Center at 1-877-754-6413. It is extremely important that we inspect the pipeline for potential damage. Even minor scratches, scrapes, gouges, dents or creases to the pipeline or its coating could result in future safety problems.

EMERGENCY RESPONSE

Though rare, pipeline failures can occur. Hazards associated with pipeline failure include line rupture, fire, blowing gas, explosion and, if gas is present in a confined space, possible asphyxiation. Vaquero has an established emergency response plan and our pipeline technicians are prepared to handle emergencies should one arise. We work closely with local emergency responders to provide education about our pipeline

operations and how to respond in the unlikely event of an emergency. In the event of a pipeline emergency, our personnel will respond immediately and:

- Locate the site of the emergency and stop or reduce gas flow to the area.
- Notify and work with the appropriate public safety official.
- Repair the facility and restore service to affected customers as soon as possible.
- Fully investigate the cause of the incident.

HOW TO GET ADDITIONAL PRODUCT CHARACTERISTICS

Product	Leak Type	Vapors	Health Hazards	Fire Hazards
Natural Gas	Gas	Lighter than air	Extremely high concentrations may cause irritation or asphyxiation	Extremely flammable and easily ignited by heat, sparks or flames
Highly Volatile Liquids (HVL) (Natural Gas Liquids & Condensate)	Liquid/Gas	Heavier than air	Respiratory tract irritant; may cause central nervous system effects, drowsiness, asphyxiation	Extremely flammable and easily ignited by heat, sparks or flames
