HIGH ROAD
RESOURCES

ABOUT HIGH ROAD MIDSTREAM, LLC

High Road Midstream, LLC is a company involved in the exploration and production of oil, natural gas and natural gas liquids in the Appalachian Basin. Our company was founded by a group of individuals who believe in a true partnership to harness the natural resources beneath our feet. High Road Midstream, LLC is headquartered just south of Pittsburgh, Pennsylvania and its initial exploration and development activities are focused in the northern panhandle of West Virginia. Our operations include leasing mineral rights, constructing well pad sites, drilling and completion operations, and creating and maintaining midstream pipelines to transport produced hydrocarbons. At High Road Midstream, LLC, we believe in leading by example in producing energy for this country while raising the bar for workplace safety and environmental responsibility.

CALL BEFORE YOU DIG. IT'S THE LAW!

Because even relatively minor excavation activities like landscaping or fencing can cause damage to a pipeline, its protective casing and/or buried utility lines, always contact your state One-Call Center before engaging in any excavation, construction, farming or digging. Most states require 48 hours notice to the One-Call Center to allow the utility operators to mark their pipelines and utilities at your proposed digging site. In fact, most serious damage done to pipelines is done when a third party inadvertently excavates, blasts or drills within a pipeline right-of-way. By contacting the One-Call Center first, this type of damage can be prevented. Sometimes pipeline companies will require a representative present to monitor the safe excavation.

One easy FREE phone call to 811 starts the process to get your underground pipelines and utility lines marked. When you call 811 from anywhere in the country, your call will be routed to your state One-Call Center. Once your underground lines have been marked for your project, you will know the approximate location of your pipelines and utility lines, and can dig safely. More information regarding 811 can be found at www.call811.com.

**Know what's below.
Call before you dig.**

HOW WOULD YOU KNOW WHERE THE PIPELINE IS?

Most pipelines are underground, where they are more protected from the elements and minimize interference with surface uses. Even so, pipeline rights-of-way are clearly identified by pipeline markers along pipeline routes that identify the approximate—NOT EXACT—location of the pipeline. It also contains High Road Midstream, LLC company information, type of product transported, and the emergency contact number. **Markers do not indicate pipeline burial depth, which will vary.**

Changes may occur. Contact the operator to discuss their pipeline systems and areas of operation.

WHAT DOES HIGH ROAD MIDSTREAM, LLC DO IF A LEAK OCCURS?

To prepare for the event of a leak, High Road Midstream, LLC personnel regularly communicate, plan and train with local emergency responders. Upon the notification of an incident or leak High Road Midstream, LLC will immediately dispatch trained personnel to assist emergency responders. High Road Midstream, LLC personnel and emergency responders are trained to protect life, property and facilities in the case of an emergency.

HOW WOULD YOU RECOGNIZE A PIPELINE LEAK?

Understand the signs of a pipeline leak...

- **Sight:** Continuous bubbling or blowing water in wet or flooded areas, vaporous fogs or blowing dirt around a pipeline area or hole in the ground, dead or discolored plants in an otherwise healthy area of vegetation or frozen ground in warm weather are all signs of a pipeline leak. Natural gas is colorless, but vapor and "ground frosting" may be visible at high pressures.
- **Sound:** Volume can range from a quiet blowing or hissing to a loud roar.

- **Smell:** An unusual smell or gaseous odor will sometimes accompany pipeline leaks. Natural Gas is colorless, tasteless and odorless unless commercial odorants or Mercaptan is added. Gas transmission/gas gathering pipelines are odorless, but may contain a hydrocarbon smell.

WHAT TO DO IN THE EVENT A LEAK WERE TO OCCUR:

- Turn off all equipment and eliminate any ignition sources without risking injury.
- Leave the area by foot immediately. Try to direct any other bystanders to leave the area. Attempt to stay upwind.
- Move to a safe location, notify High Road Midstream, LLC immediately and call 911 or your local emergency response number. High Road Midstream, LLC and the 911 operator will need your name, your phone number, a brief description of the incident, and the location so the proper response can be initiated.
- Evacuate everyone from the area and prevent others from entering.

WHAT NOT TO DO IN THE EVENT A LEAK WERE TO OCCUR:

Act immediately if you suspect a leak...

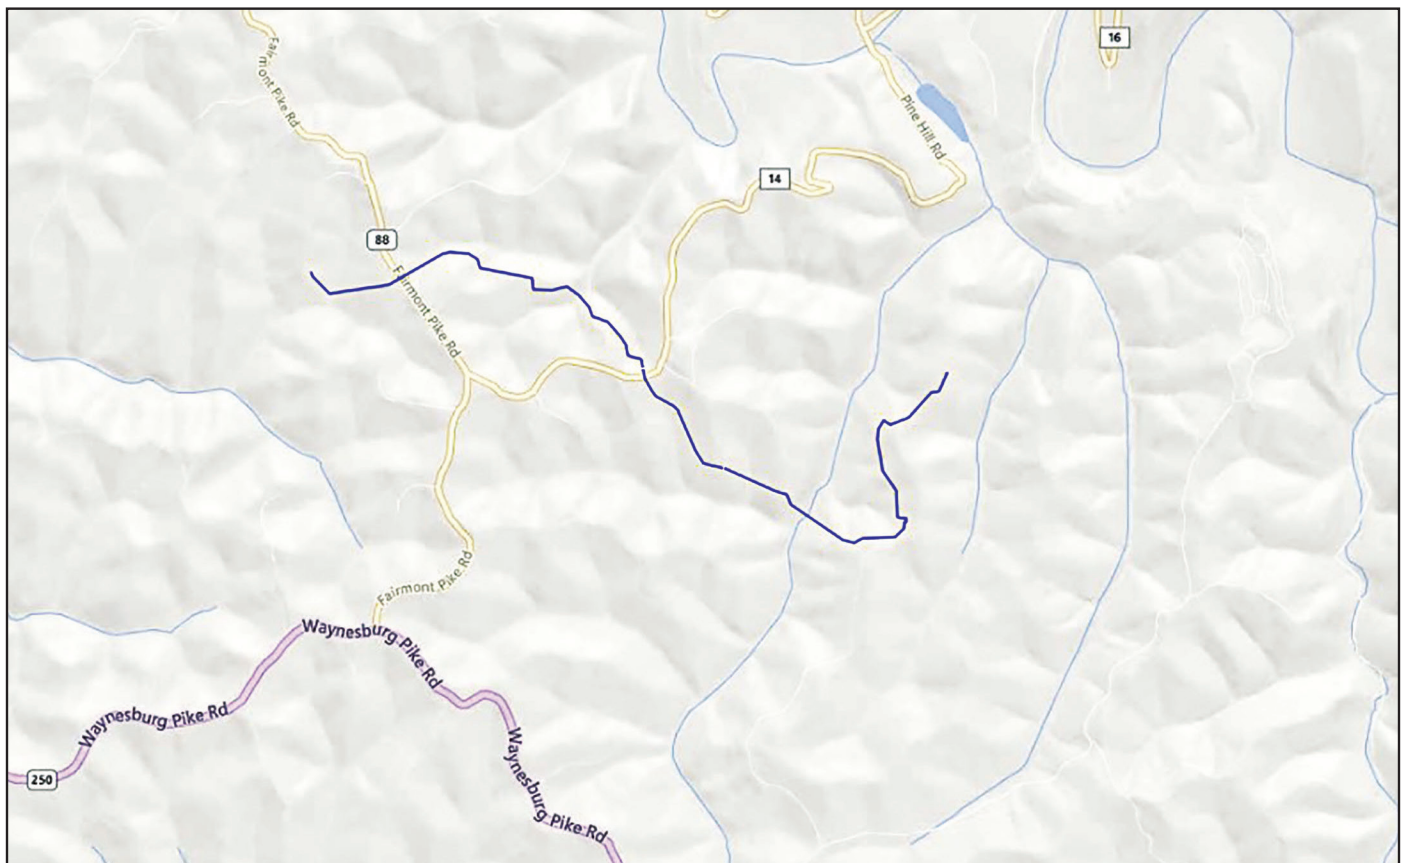

- **DO NOT** cause any open flame or other potential source of ignition such as an electrical switch, vehicle ignition, light a match, etc. Do not start up or shut down motor vehicles or electrical equipment. Do not ring doorbells to notify others of the leak. Knock with your hand to avoid potential sparks from electric doorbells.
- **DO NOT** come into direct contact with any escaping vapors or natural gas.
- **DO NOT** drive into a leak or vapor cloud while leaving the area.
- **DO NOT** attempt to operate any pipeline valves yourself. You may inadvertently route more product to the leak or cause a secondary incident.
- **DO NOT** attempt to extinguish a pipeline fire. Wait for local firemen and other professionals trained to deal with such emergencies.

MAINTAINING SAFETY AND INTEGRITY OF PIPELINES

High Road Midstream, LLC invests significant time and capital maintaining the quality and integrity of their gas utility system. The system is monitored 24 hours a day. High Road Midstream, LLC also utilizes ground surveillance patrolling to identify potential dangers. Field personnel are immediately notified if there is a possibility of a leak. System valves can be utilized to isolate a leak.

EMERGENCY RESPONSE PLANS

An Emergency Response Plan is developed for each pipeline facility to contain, control and mitigate the various types of emergency conditions/situations that could occur at one of our facilities. For more information regarding High Road Midstream Pipeline's emergency response plans and procedures, contact us directly.
